**INSTALLATION AND OPERATING INSTRUCTIONS**

**INSTALLER:** Leave these instructions with consumer. **CONSUMER:** Retain for future reference.

**Important:** READ THESE INSTRUCTIONS CAREFULLY BEFORE STARTING INSTALLATION

---

**WARNINGS AND SAFETY CODES**

**DANGER:**

IF YOU SMELL GAS:
1. Shut off the gas to the appliance.
2. Extinguish any open flame.
3. Open lid.
4. If odor continues, keep away from the appliance and immediately call your gas supplier or the fire department.

**WARNING:**

1. Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.
2. An LP cylinder not connected for use shall not be stored in the vicinity of this or any other appliance.

**WARNING:**

Improper installation, adjustment, alteration, service, or maintenance can cause injury or property damage. For proper installation, refer to the installation instructions. For assistance or additional information, consult a qualified professional service technician, service agency, or the gas supplier.

**CODE AND SUPPLY REQUIREMENTS:** This appliance must be installed in accordance with local codes and ordinances, or, in the absence of local codes, with the latest National Fuel Gas Code (ANSI Z223.1/NFPA 54), or Natural Gas and Propane Storage and Handling Installation Code (CSA-B149.1).

This appliance and its dedicated manual shutoff valve must be disconnected from the gas-supply piping system when testing the system at pressures in excess of ½ psig (3.5 kPa).

This appliance must be isolated from the gas-supply piping system by closing its dedicated manual shutoff valve during any pressure testing of the gas-supply system at pressures up to and including ½ psig (3.5 kPa).

Proper operation of your appliance requires prompt and periodic maintenance. See the CARE & CLEANING section for details.

All electrical outlets in the vicinity of the appliance must be properly grounded in accordance with local codes, or, in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70, or the Canadian Electrical Code, CSA C22.1, whichever is applicable.

Keep all electrical-supply cords and fuel-supply hoses away from any heated surface.

Certified to: ANSI Z21.58b-2012
CSA 1.6b-2012

SÛRETÉ ET CODES D’AVERTISSEMENT
INSTALLATION INSTRUCTIONS ET MANUEL DU PROPRIÉTAIRE
DANS LE CONTRE-SINGLE SEARING STATION

⚠️ DANGER:
SI VOUS SENTEZ LE GAZ :
1. Coupez le gaz à l’appareil.
2. Éteignez-vous n’importe quelle flamme nue.
3. Ouvrez le couvercle si équipé d’un four.
4. Si l’odeur continue, gardez loin de l’appareil et appelez immédiatement votre département de fournisseur ou de feu de gaz.

⚠️ AVERTISSEMENT:
1. Ne stockez pas ou n’employez pas l’essence ou d’autres vapeurs et liquides inflammables à proximité de ceci ou d’aucun autre appareil.
2. Un cylindre de propane non relié pour l’usage ne sera pas stocké à proximité de ceci ou d’aucun autre appareil.

CONDITIONS DE CODE ET D’APPROVISIONNEMENT:
Ce gril doit être installé selon des codes et des ordonnances locaux, ou, en l’absence des codes locaux, avec l’un ou l’autre le plus défunt Code national de gaz de carburant (norme ANSI Z223.1/NFPA 54), et Stockage de gaz naturel et de propane et manipulation du code d’installation (CSA-B149.1).

Cet appareil et ses différents robinets d’isolation doivent être démontés du gaz-fournissent le système sifflant en examinant le système aux pressions au-dessus du ½ psig (kPa 3.5).

Cet appareil doit être isolé dans gaz-fournissent le système sifflant par fermeture que ses différents robinets d’isolation manuels pendant tous les essais sous pression du gaz-fournissent le système aux pressions jusques et y compris le ½ psig (kPa 3.5).

• Ce gril est pour utilisation à l’extérieur seulement. Si l’appareil est entreposé à l’intérieur, enlever les bouteilles et les laisser à l’extérieur.
• Ne pas ranger le gril immédiatement après l’avoir utilisé. Le laisser refroidir avant de le déplacer ou de la ranger. Le non respect de cette mesure de sécurité pourrait entraîner un incendie causant des dommages à la propriété, des blessures ou la mort.
• Ne pas utiliser cet appareil sous une surface combustible.
• Ne pas utiliser cet appareil sous un auvent. Le non respect de cette mesure de sécurité pourrait entraîner un incendie ou des blessures.
• Dégagement minimal entre les parois latérales et l’arrière de l’appareil et la construction combustible (45.7 cm à partir des parois latérales et 45.7cm à partir de l’arrière).
• Le régulateur de pression de gaz prévu avec cet appareil de cuisson à gaz pour l’extérieur doit être utilisé. Ce régulateur est réglé pour une pression de sortie de 5 pouces de colonne de l’eau pour le gaz naturel, et 10 pouces pour le propane.
• LE RÉGULATEUR INCLUS D’APPAREILS EST ÉVALUÉ POUR LE MAXIMUM DE 1/2 (LIVRES PAR POUCHE CARRÉ). SI VOTRE OFFRE DE GAZ EST 1/2 PLUS GRAND QUE (LIVRES PAR POUCHE CARRÉ), UN RÉGULATEUR ADDITIONNEL DOIT ÊTRE INSTALLÉ AVANT LE GRIL. VOIR LA SECTION DE CONDITIONS

AVERTISSEMENT:
L’installation inexacte, l’ajustement, le changement, le service, ou l’entretien peuvent causer des dommages ou des dégâts matériels. Référez-vous à ce manuel. Pour de l’aide ou des renseignements supplémentaires, consultez un technicien professionnel qualifié de service, une agence de service ou le fournisseur de gaz.

Toutes les sorties électriques à proximité du gril doivent être correctement fondées selon des codes locaux, ou en l’absence de local code, avec le code électrique national, ANSI/NFPA 70, ou le code électrique canadien, CSA C22.1, celui qui est applicable.

Maintenez tout électrique-fournissent des cordes et carburant-fournissent des tuyaux partis de n’importe quelle surface de chauffage.

D’OFFRE DE GAZ POUR LA PRESSION APPROPRIÉE D’OFFRE DE GAZ.
• Ne couvrez jamais la surface entière de cuisine ou de gril de gaufreuses ou de casseroles. La surchauffe se produira et les brûleurs ne seront pas très performants quand la chaleur de combustion est emprisonnée au-dessous de la surface à cuire.
• Ne pulvérissez jamais l’eau sur une unité chaude de gaz, comme ceci peut endommager des composants de porcelaine ou de fer de fonte.
• Une fuite de GPL peut causer une incendie ou une explosion si enflammée entraînant des blessures corporelles graves ou la mort.
• Communiquerez avec le fournisseur de GPL pour les réparations ou pour disposer de quels bouteille ou du GPL non utilisé.

Certifié à la norme: ANSI Z21.58b-2012
CSA 1.6b-2012

INSTALLATEUR : Laissez ces instructions avec le consommateur.
CONSOMMATEUR : Maintenez pour la future référence.

CAUTION

Do not strike or scrape the ceramic portion of the burner with hard tools, as the material may crack, chip, or break. Prevent any grease, water, or other foreign material from getting into the ceramic portion of the burner, especially when cold. Always wait for the burner to heat up to a well-distributed red glow before placing food on the cooking grid. When a burner is hot, it will vaporize small amounts of grease that drip on it. Always cover the burner when not in use. Keeping the ceramic portion of the burner free of foreign substances will allow the gas to circulate and burn over the entire heating surface, allowing for powerful and even cooking over the life of the burner.

| C   | Front to back cut-out†                                        | 22-3/4"   |
| D   | Control panel width cut-out‡                                   | 15-1/4"   |

* Note: If installing this unit in a combustible enclosure, the correct insulating liner must be used. Consult liner instructions for counter cut-out dimensions and installation.

† Includes any substrate at front wall of enclosure (in the area the rear of the control panel is to sit flush against). See SUBSTRATE section on next page.

‡ Only applicable for non-combustible enclosures that have countertops with an overhang (see illustration and section below).

COUNTERTOP OVERHANG

The control panel is designed to sit flush against the enclosure front wall. If the non-combustible enclosure countertop extends beyond the front wall, creating a countertop overhang, it must be cut flush with the front wall for the width of the control panel or a gap will be created exposing the forward portions of the left and right side fire walls of the unit. See illustrations above.

Important: FOR YOUR SAFETY, you must provide openings in the island enclosure for drainage, replacement air, and cross-ventilation of any storage area exposed to possible leakage from gas connections, the unit, or propane tanks. See the ENCLOSURE REQUIREMENTS section for details.
MODEL SPECIFICATIONS (cont.)

SUBSTRATE
When adding any substrate to the enclosure front wall (including tiles, stone, etc.), consider the following:

Substrate Behind Control Panel
Substrate + countertop "front to back" cutout must equate to Dim. C (see previous page) when the substrate sits flush behind the control panel.

Substrate Alongside Control Panel
Any additional substrate alongside the control panel does not need to be considered in Dim. C (see previous page), however a 1/4" clearance on each side (same as overhang) and below is required.

MODEL SPECIFICATIONS (cont.)

SINGLE SEARING STATION WIRING DIAGRAM

Note: In addition, a wire diagram for this unit can be found affixed to the inside of the control panel.

ELECTRICAL SAFETY

To protect against electric shock, do not immerse cord or plugs (if equipped) in water or other liquid. Unplug from the outlet (if applicable) when not in use and before cleaning. Allow to cool before putting on or taking off parts.

Do not operate any outdoor cooking gas appliance with a damaged cord, plug, or after the appliance malfunctions or has been damaged in any manner. Contact the manufacturer for repair.

Do not let the cord hang over the edge of a table or touch hot surfaces.

Do not use an outdoor cooking gas appliance for purposes other than intended.

When connecting, first connect plug to the outdoor cooking gas appliance then plug appliance into the outlet.

Use only a properly wired and inspected 120VAC (15 AMP minimum) GFCI GROUNDED 3-wire receptacle with this outdoor cooking gas appliance.

Never remove the grounding plug or use with an adapter of 2 prongs.

Use only extension cords with a 3 prong grounding plug, rated for the power of the equipment, and approved for outdoor use with a W-A marking.
MAINTENANCE AND SAFETY INFORMATION

1. The searing station and surrounding area MUST remain clear of flammable substances such as gasoline, yard debris, wood, etc.

2. The airflow through the vent space located below the control panel must remain unobstructed.

3. When using propane gas:
   a. The required ventilation openings in the enclosure must be clear of debris. See the PROPANE SAFETY INFORMATION section.
   b. The propane cylinder, regulator, and rubber hose must be in a location not subject to temperature above 125°F (51°C).

4. The flames on the burner burn evenly along the ceramic grid surface with a steady flame (mostly blue). See FLAME PATTERN section below. If burner flames are not normal, check and clean the orifice and burner tube for insects and insect nests. A clogged tube can lead to a fire beneath the unit. A proper flame pattern will ensure safe operation and optimal performance.

5. The in-line gas valve or gas cylinder valve must always be shut OFF when the unit is not in use.

6. Do not operate the burner with the lid in place.

7. Whenever reconnecting any wires, apply a small amount of dielectric grease to the male connector, then make the connection. This will ensure conductivity and prevent moisture from affecting the contact.

WARNING: NEVER cover more than 75% of the cooking surface with griddles or pans. Overheating will occur, and burners will not perform properly when combustion heat is trapped below the cooking surface.

CAUTION: NEVER spray water on a hot gas unit.

The unit serial identification number is located on the underside of the drip tray handle. It is recommended that the drip tray first be removed and cleaned / emptied of its contents, then turned over to view. The unit rating label is located on the inside of the control panel.

SINGLE SEARING STATION FLAME PATTERN

A layer of flame may just be visible above the ceramic grid of the searing station burner especially around the edges. The flame will initially appear mostly blue with perhaps a few yellow flashes. Soon the red glow of the ceramic will be the primarily visible color of the burner top. Though there may be small areas of lesser or greater intensity, the overall red color will become fairly even after about three to five minutes.

ELECTRICAL CONNECTIONS

A 120VAC (15 AMP minimum) Ground Fault Circuit Interrupter (GFCI) GROUNDED 3-wire receptacle (not included) is required within the vicinity of the unit to provide power to the unit.

- Observe all local codes.
- Verify proper polarity of the receptacle.
- If an extension cord is used, ensure it is a 3-wire GROUNDED cord that is rated for the power of the equipment, and is approved for outdoor use with a W-A marking. DO NOT use 2-prong adapters.
- DO NOT TAMPER WITH THE EXTENSION CORD OR THE UNIT POWER-SUPPLY CORD.

LIGHT SWITCH

The light switch is push button operated, and is located on the right side of the control panel (see Fig. 8-2). It controls the power to the lighted knob and igniter. It allows the power to be turned on or off for safety and convenience. The switch will need to be turned on prior to each use, and turned off after each use.
Installation Requirements

Installation must be performed by a qualified professional service technician.

This unit is designed for outdoor use only. **DO NOT** use this unit inside a building, garage, enclosed area, or under overhead combustible construction.

See below and the EXHAUST REMOVAL section on the following page for details on installing under non-combustible overhead construction.

**DO NOT** use this unit in or on a recreational vehicle or boat.

**Important:** If installing this unit in a combustible surround, the correct RHP insulating liner must be used.

**Important:** Refer to the information below to ensure all required clearances are met.

The unit must have a minimum clearance of 18" from combustible materials/items AT ALL TIMES.

Overhead Construction Requirements (if applicable)

This outdoor cooking gas appliance shall not be used under overhead combustible construction.

A minimum clearance of 5 feet is required between the countertop and the non-combustible construction above (Fig. 9-1).

Side and Rear Wall Clearances

For the minimum clearances between the unit and any side or rear walls, your setup must fall within one (or more) of the following:

A. Clearance between unit and strictly non-combustible wall
   (i.e. brick wall, see Fig. 9-2)
   - The unit **must** have a minimum of 4" right, left, and rear clearance from any non-combustible wall.
     (To allow for proper ventilation and prevent dangerous overheating.)

B. Clearance between unit and a protected combustible wall
   (i.e. a non-combustible wall in front of a combustible wall to serve as a barrier. This can be accomplished by brick, or a metal stud finished with non-combustible substrate, see Fig. 9-3)
   - The unit **must** have a minimum of 14" right, left, and rear clearance from the protected combustible wall.
     (The 4" non-combustible material plus an additional 10" clearance between the unit and protected wall.)

C. Clearance between unit and combustible wall
   - The unit **must** have a minimum of 18" right, left, and rear clearance from any combustible wall (see Fig. 9-4).

Backsplash Clearance (if applicable)

If a non-combustible backsplash exists, it **must** have a minimum of a 4" clearance from the rear of the unit (to allow for proper ventilation and prevent dangerous overheating). See Fig. 9-5.

**Important:** This 4" backsplash clearance must first be met prior to any non-combustible walls beginning behind it.

---

Fig. 9-1 Overhead requirements

Fig. 9-2 Clearance 'A' Diagram

Fig. 9-3 Clearance 'B' Diagram

Fig. 9-4 Clearance 'C' Diagram

Fig. 9-5 Backsplash clearance
INSTALLATION REQUIREMENTS (cont.)

The control panel MUST remain removable for servicing (see PARTS LIST).

EXHAUST REMOVAL

If the unit is installed under an overhead structure, it must be constructed of non-combustible material. An exhaust hood is recommended. See below.

When using an exhaust hood:

The cooking grid area must be covered by an exhaust hood (with a vent) larger than the cooking surface. Refer to manufacturer specifications. An exhaust fan with a rating of 1,000 CFM (cubic feet per minute) (472 liters per second) or more may be necessary to effectively remove smoke and other cooking by-products from the area under the hood. RHP Vent Hoods are available, contact your local dealer.

THIS UNIT MUST NOT BE LOCATED IN A FULLY ENCLOSED AREA OF ANY KIND.

ENSURE PROPER COMBUSTION AIR AND COOLING AIRFLOW

Proper airflow (Fig. 10-1) MUST be maintained for the searing station to perform as it was designed. If airflow is blocked, overheating and poor combustion will result. Do not block the 1” front air inlet along the bottom of the control panel or more than 75% of the cooking grid surface with pans or griddles.

GAS-SUPPLY PLUMBING REQUIREMENTS

For natural gas or a household propane system, rigid 1/2” or 3/4” black steel pipe or local code-approved pipe is required to conduct the gas supply to the unit. Contact your local gas supplier. Connect this pipe to a required C.S.A.-approved stainless-steel flex connector (attached). An NPT adapter has been provided for 1/2” pipe. DO NOT use a rubber hose within the unit enclosure. Apply only joint compounds that are resistant to all gasses to all male pipe fittings except flare fittings. Make sure to tighten every joint securely.

Note: If 1/2” pipe is used with natural gas, it should be no longer than 20’.

Important: A shut-off valve (not included) in the gas line is required. It provides for safety when the unit is not in use and for convenient maintenance and repair. It must be installed within 6 feet of the unit. Use a pipe joint compound resistant to all gasses on all male fittings except flare fittings.

GAS SUPPLY AND MANIFOLD Pressures:

For natural gas - normal 7” (17.78 cm) water column (w.c.), minimum 5” (12.7 cm), maximum 10 1/2” (26.7 cm). For propane gas - normal 11” w.c., minimum 10” (25.4 cm), maximum 13” (33 cm).
ENCLOSURE REQUIREMENTS

VENTILATION (ALL ENCLOSURES)

For All Piping Systems and All Gas Types:
(Natural Gas, Household Propane, L.P. Cylinder)

FOR YOUR SAFETY, you must provide the openings listed below for replacement air and cross-ventilation of the unit enclosure.

One side of the enclosure shall be left completely open to the outside; OR 4 (minimum) ventilation openings MUST be created (reference Fig. 11-1):

Each opening must have a minimum of 10 sq. in. of free area. The openings must be equally sized and unobstructed.

Two openings must be in the side walls of the enclosure, at the top level, and spaced at 180 degrees. The openings must begin 1" or less below the countertop level and end no more than 5" below the countertop level.

Two openings must be in the side walls of the enclosure, at the floor level, and spaced at 180 degrees. The openings must begin 1" or less above the floor level and end no more than 5" above the floor level.

To achieve the proper ventilation, you may use RHP venting panels (PN 5510-01) as shown. Contact your dealer.

KEEP THE VENT OPENINGS AND SURROUNDING AREA OF THE ENCLOSURE CLEAN AND FREE OF OBSTRUCTIONS AT ALL TIMES.

WARNING: Ventilation openings in side walls shall not communicate directly with other enclosures of the outdoor cooking gas appliance.

WHEN A PROPANE (L.P.) CYLINDER IS USED IN THE ENCLOSURE

When a propane (L.P.) cylinder is installed inside of the enclosure, the guidelines below MUST be followed. FAILURE TO DO SO MAY CAUSE DAMAGE TO YOUR UNIT AND/OR PERSONAL INJURY. Reference Fig. 11-2 for an example.

• Only a C.S.A. listed stainless steel connector can be connected to the unit.
• The regulator/hose assembly coming from the propane cylinder can only be connected to the above mentioned unit flex connector. DO NOT connect the regulator/hose assembly directly to the unit. An adapter will be required.
• A heatshield must be installed to protect the regulator/hose assembly and propane cylinder valve.
• RHP offers propane tank door with tank tray models (PN 23920-1T-S or 25914-S) to meet the cylinder install requirements. See Fig. 11-3.
WHEN OPERATING THIS APPLIANCE WITH PROPANE, ALL INSTRUCTIONS AND WARNINGS MUST BE OBSERVED. FAILURE TO DO SO MAY RESULT IN A FIRE OR EXPLOSION CAUSING SERIOUS INJURY OR DEATH.

WARNING
This gas appliance, its enclosure, and the propane cylinder enclosure, if any, MUST be plumbed and vented in accordance with local building and safety codes and should be approved by local code enforcement officials. This appliance MUST be installed and operated according to the information below.

FAILURE TO PROPERLY VENT THE ENCLOSURE MAY RESULT IN A FIRE OR EXPLOSION CAUSING SERIOUS INJURY OR DEATH.

When using propane gas:

- **Propane gas** (also known as L.P. gas) is heavier than air and will accumulate or pool in an inadequately vented enclosure or recessed area.
- A leaking gas connection or valve unintentionally left open will create a hazard.
- If a pool of propane gas is ignited, an explosion will occur. Adequate venting at the floor level, or the lowest point where gas could accumulate, will eliminate this danger.
  
  Refer to the ENCLOSURE REQUIREMENTS section.
  
  Observe all local codes.
- DO NOT store a spare propane-gas cylinder under or near the enclosure.

INSTALLATION SAFETY GUIDELINES

THIS UNIT MUST BE INSTALLED IN SUCH A MANNER THAT ALL REQUIRED VENT OPENINGS ON THE UNIT ENCLOSURE REMAIN CLEAR AND FREE OF ALL OBSTRUCTIONS AT ALL TIMES AND DURING ALL WEATHER CONDITIONS. See the ENCLOSURE REQUIREMENTS section for details.

Important: FOR YOUR SAFETY, you must provide openings in the enclosure for replacement air and cross-ventilation (in case of possible leakage from gas connections or propane cylinders). See the ENCLOSURE REQUIREMENTS section for details.

The gas cylinder, regulator, and rubber hose must be in a location not subject to temps. above 125°F (51° C).

WHEN A PROPANE CYLINDER IS INSTALLED INSIDE OF THE ENCLOSURE, THE GUIDELINES FOUND IN THE ENCLOSURE REQUIREMENTS SECTION MUST BE FOLLOWED.

OPERATING THE UNIT SAFELY AND CORRECTLY

Every time you use the unit, make sure that:

1. The area around the enclosure is clear and free from combustible materials, gasoline and flammable vapors/liquids.
2. There is no blockage of the airflow through the vent openings located on the enclosure.
3. The hose is inspected (if applicable). See SAFE USE & MAINTENANCE OF PROPANE-GAS CYLINDERS section.

DO NOT store any combustible materials, gasoline, and any other flammable vapors/liquids in the vicinity of the unit. Provide adequate clearance for servicing and operation.
SAFE USE & MAINTENANCE OF PROpane GAS CYLINDERS

IMPORTANT FOR YOUR SAFETY
READ AND FOLLOW ALL WARNINGS PROVIDED WITH THE PROpane-GAS CYLINDER.
When operating this appliance with a propane-gas cylinder, these instructions and warnings MUST be observed.
FAILURE TO DO SO MAY RESULT IN A SERIOUS FIRE OR EXPLOSION.

CYLINDER/CONNECTOR REQUIREMENTS

a. Propane-gas cylinders, valves, and hoses must be maintained in good condition and must be replaced if there is visible damage to either the cylinder or valve. If the hose is cut or shows excessive abrasion or wear, it must be replaced before using the gas appliance (see e.).

b. This unit, when used with a cylinder, should be connected to a standard 5-gallon (20 lb.) propane-gas cylinder equipped with an OPD (Overfill Prevention Device). The OPD has been required on all cylinders sold since October 1, 1998, to prevent overfilling.

c. Cylinder dimensions should be approximately 12” (30.5 cm) in diameter and 18” (45.7 cm) high. Cylinders must be constructed and marked in accordance with the Specifications for Propane Gas Cylinders of the U.S. Department of Transportation (D.O.T.) or the National Standard of Canada, CAN/CSA-B339, Cylinders, Spheres, and Tubes for Transportation of Dangerous Goods.

d. The cylinder used must include a collar to protect the cylinder valve, and the cylinder supply system must be arranged for vapor withdrawal.

e. The pressure regulator and hose assembly used must match the specification for Type I by ANSI Z21.58-2005/CGA 1.6-2005 (see Fig. 13-1).

f. The propane-gas cylinder valve must be equipped with a cylinder connection coupling device, described as Type I in the standard defined in paragraph e. above. This device is commonly described as an Acme thread quick coupler.

g. If the propane-gas cylinder comes with a dust plug, place the dust cap on the cylinder valve outlet whenever the cylinder is not in use.

QUICK COUPLER OPERATION

To connect the regulator/hose assembly to the propane-gas cylinder valve fitting: Press the hand nut on the regulator over the Acme thread fitting on the cylinder valve. Turn the hand nut clockwise to engage the threads and tighten until snug.

The use of pliers or a wrench should not be necessary. Only cylinders marked “propane” may be used.

To disconnect: Turn the hand nut counterclockwise until detached (Fig. 13-1).

Important: Before using the unit, and after each time the cylinder is removed and reattached, check the hose for wear (see a.) and check all connections for leaks. Turn off the unit valves and open the main cylinder valve, then check connections with soapy water. Repair any leaks before lighting the unit.

CAUTION: Always turn the propane cylinder main valve off after each use, and before moving the unit and cylinder or disconnecting the coupling. This valve must remain closed and the cylinder disconnected while the appliance is not in use, even though the gas flow is stopped by a safety feature when the coupler is disconnected.

Carefully inspect the hose assembly each time before the gas is turned on. A cracked or frayed hose must be replaced immediately.

If the appliance is stored indoors, the cylinder must be disconnected and removed. Disconnected cylinders must be stored outdoors, out of the reach of children, with threaded valve plugs tightly installed, and must not be stored in a building, garage, or any other enclosed area.

FOR YOUR SAFETY

a. DO NOT store a spare propane-gas cylinder under or near this appliance.

b. NEVER fill the cylinder beyond 80-percent full.

c. IF THE INFORMATION IN a. AND b. IS NOT FOLLOWED EXACTLY, A FIRE CAUSING DEATH OR SERIOUS INJURY MAY OCCUR.

Fig. 13-1 Type I Acme thread quick coupler

For propane ventilation requirements, see the ENCLOSURE REQUIREMENTS section.
UTILISATION SÛRE ET ENTRETIEN DES CYLINDRES DE GAZ DE PROPANE

IMPORTANT POUR VOTRE SÛRETÉ

LISEZ ET SUIVEZ TOUS LES AVERTISSEMENTS ÉQUIPÉS DE VOTRE CYLINDRE DE GAZ DE PROPANE.

En actionnant cet appareil avec un cylindre de gaz de propane ON DOIT observer ces instructions et avertissements.

LE MANQUE DE FAIRE AINSI PEUT AVOIR COMME CONSÉQUENCE UNE INCENDIE OU UNE EXPLOSION SÉRIEUSE.

CYLINDRE ET CONDITIONS ET CARACTÉRISTIQUES DE CONNECTEUR

a. Des cylindres et les valves de gaz de propane doivent être maintenus en bon état et doivent être remplacés s’il y a des dommages évidents au cylindre ou à la valve.

b. Ce grill, une fois utilisé avec un cylindre, devrait être réplié à un gallon de la norme 5 (20lb.) cylindre de gaz de propane équipé d’un OPD (remplissez au-dessus du niveau le dispositif d’empêchement). L’OPD a été exigé sur tous les cylindres vendus depuis octobre 1.1998 pour empêcher le remplissage excessif.

c. Les dimensions de cylindre devraient être approximativement 12"(30.5cm) de diamètre et 18" (45.7cm) hauts. Des cylindres doivent être construits et marqués selon les caractéristiques pour des cylindres de gaz de propane du département des ETATS-UNIS du transport (D.O.T) ou le niveau national du Canada, du CAN/CSA-B339, des cylindres, des sphères et des tubes pour le transport des marchandises dangereuses.

d. Le cylindre doit inclure un collier pour protéger la valve de cylindre et le circuit d’alimentation de cylindre doit être assuré le retrait de vapeur.

e. Le régulateur de pression et l’ensemble de tuyau utilisé doivent assortir les spécifications pour le type I par ANSI Z 21.58-2005/CGA 1.6-2005 (voir la figure. 14-1).

f. La valve de cylindre de gaz de propane doit être équipée d’un dispositif d’accouplement de raccordement de cylindre, décrit comme type I dans la norme définie dans le e. de paragraphe ci-dessus. Ce dispositif est généralement décrit comme coupleur rapide de fil de point culminant.

g. Si votre cylindre de gaz de propane vient avec une prise de la poussière, placez le bouchon anti-poussière sur la sortie de valve de cylindre toutes les fois que le cylindre n’est pas en service.

OPÉRATION DE COUPLEUR RAPIDE

Pour relier le regulator/hose à l’ajustage de précision de valve de cylindre de gaz de propane: Serrez l’écrou de main dans le sens des aiguilles d’une montre pour engager les fils et pour serrer jusqu’à ce que douillement. L’utilisation des pinces ou de la clé ne devrait pas être nécessaire. Seulement le propane marqué par cylindres doit être employé.

Pour débrancher: Tournez l’écrou de main dans le sens contraire des aiguilles d’une montre jusqu’à isolé (fig. 14-1).

Important: Avant d’employer le grill, et ensuite chaque fois que le cylindre est enlevé et rattaché, examinez tous les raccordements pour déceler les fuites. Arrêtez les valves de grill et ouvrez la valve principale de cylindre, puis vérifiez les raccordements avec de l’eau savonneux. Réparez toutes les fuites avant d’allumer le grill.

ATTENTION: Tournez toujours la valve principale de cylindre de propane au loin après chaque utilisation, et avant de déplacer le grill et le cylindre, ou débrancher l’accouplement. Cette valve doit rester fermée et le cylindre a débranché alors que l’appareil n’est pas en service, quoique l’écoulement de gaz soit arrêté par un dispositif de sûreté quand le coupleur est débranché.

Inspectez soigneusement l’ensemble de tuyau chaque fois avant que le gaz soit allumé. Un tuyau fissuré ou effiloché doit être immédiatement remplacé.

Si l’appareil est stocké à l’intérieur, le cylindre doit être disconnected et a enlevé. Des cylindres Disconnected doivent être stockés dehors, hors de la portée des enfants, avec les prises de valve filetées étroitement installées, et ne doivent pas être stockés dans un bâtiment, le garage, ou n’importe quel autre secteur inclus.

POUR VOTRE SÛRETÉ

a. Ne stockez pas un cylindre de gaz disponible de propane dessous ou ne vous approchez pas de cet appareil.

b. Ne remplissez jamais cylindre au delà de 80 pour cent de plein.

c. SI L’INFORMATION DANS "A" ET "B" N’EST PAS SUIVIE EXACTEMENT, UN FEU CAUSANT LA MORT OU DES DOMMAGES SÉRIEUX PEUT SE PRODUIRE.

Fig. 14-1 type coupleur rapide de fil de point culminant d’l

Pour la ventilation de propane, voir la section sur les exigences de boîtier.
COUNTER PREPARATION
Consult Table 1 for non-combustible enclosure cut-out dimensions. An RHP insulating liner must be used if any supporting construction is combustible. Consult the instructions that come with the liner for dimensions and additional installation information before beginning the installation.
This searing station must be supported by the stainless-steel hanger extending from the upper portion of the frame. The hanger rests on the left, right, and back of the countertop. The control panel is designed to sit flush against the enclosure front wall (see Fig. 15-1). If the non-combustible enclosure countertop extends beyond the front wall, creating a countertop overhang (see Fig. 15-1), it must be cut flush with the front wall for the width of the control panel or a gap will be created exposing the forward portions of the left and right side fire walls of the unit. See the MODEL SPECIFICATIONS section.
Note: It is not necessary to remove the control panel or knob to install this unit.

CONNECT THE GAS SUPPLY
For propane cylinders:
For connecting a propane unit to a portable propane tank, read the safety warnings and follow the instructions in the section SAFE USE AND MAINTENANCE OF PROPANE GAS CYLINDERS.
Note: When a propane cylinder is installed inside of the enclosure, the guidelines found in the ENCLOSURE REQUIREMENTS section MUST be followed.
For household propane or natural gas units:
CAUTION: Use only C.S.A. listed stainless-steel flex connectors within the enclosure.

WARNING
A rubber or plastic connector will rupture or leak, resulting in an explosion or serious injury if used inside the appliance enclosure.

1. Locate the attached flex connector (found underneath the unit) and route it to the gas-supply stub.
2. Turn OFF the gas supply at the source.
3. A shut-off valve is required within 6 feet of the unit.
   If shut-off valve is connected to end of gas supply stub:
   • Connect the flex connector to the shut-off valve (see Fig. 15-3). Tighten securely.
   If shut-off valve is installed in-line:
   • Install the supplied flare adapter to the gas supply using a pipe joint compound resistant to all gasses (see Fig. 15-3). Tighten securely.
   • Connect the flex connector to the flare adapter (see Fig. 15-3). Tighten securely.
4. Turn the burner control knob to the **OFF** position. Turn the gas supply on. Then carefully check all gas connections for leaks with a brush and half-soap/half-water solution before lighting. **NEVER USE A MATCH OR OPEN FLAME TO TEST FOR LEAKS.**

5. Close the shut-off valve.

**CONNECT TO A POWER SOURCE**

**CAUTION:** Improperly connected wires will cause damage to the unit and may result in property damage and/or personal injury.

The unit comes with a 6' wire extension to retrieve power from a separately purchased Echelon Diamond grill. Echelon Diamond grills are equipped with power supply boxes, which can supply power to the searing station. Alternatively; an optional power supply box may be ordered and installed to individually power this unit. Contact your dealer for ordering information.

**To install using the wire extension:**

1. Locate the power supply box inside of the island enclosure and disconnect the power cord (See Fig. 16-2, A).

2. Disconnect the grill wire harness extension connectors from the power supply connectors. See Fig. 16-2, (B)

3. Locate the end of the searing station wire extension that has two molex and ground connections. Connect the extension (plug) molex connection to the power supply (receptacle) molex connection and ground wires (See Fig. 16-3, C).

4. Connect the extension (receptacle) molex to the grill (plug) molex connection and ground wires (See Fig. 16-3, D).

5. Connect the opposite end of the extension to the searing station as shown in Fig. 16-3, E (molex and ground wire connections).

6. Reconnect the power cord (see Fig. 16-3, F).

**Proceed to the SLIDE UNIT INTO ENCLOSURE section.**
To install using a power supply box (not included):

1. Install the power supply box at least 12 inches below the bottom of the searing station.

2. Fasten the power supply box to the inside of the enclosure.

3. Connect the power supply box connectors to the searing station wire harness extension, as shown in Fig. 17-1, A (molex and ground wire connections).

4. Connect the searing station wire harness extension to the searing station, as shown in Fig. 17-1, B (molex and ground wire connections).

5. Connect the cord coming from the power supply box to a **120VAC (15 AMP minimum) GFCI GROUNDED 3-wire receptacle**. See Fig. 17-1, C and Fig. 17-2.

**WARNING:** Electrical Grounding Instructions - The power supply box is equipped with a three-pronged (grounding) plug for your protection against shock hazard and should be plugged directly into a properly grounded three-prong receptacle. Do not cut or remove the grounding prong from this plug.

---

**Fig. 17-1** Connect searing station to power supply

**Fig. 17-2** Electrical setup detail
POWER SUPPLY (MULTIPLE ACCESSORY UNITS)

The previous section covers in detail how to individually connect this accessory unit to an Echelon grill power supply box. If multiple accessory units are to be installed, the following diagrams will assist in their installation.

Grill Left Install

Grill Center Install
SLIDE UNIT INTO ENCLOSURE

Slide the unit into place. Do not to pinch, kink, or damage the gas connector line.

Note: Each side of the unit has a tab just behind the control panel. These tabs prevent the control panel from moving inward. If the tabs interfere with the unit sliding in (see Fig. 19-1), use pliers to bend them inward so that they clear the enclosure sides. Leave the tabs slightly out to ensure they still keep the control panel from moving inward (see Fig. 19-2).
**ELECTRONIC LIGHTING**

**Note:** This unit must be connected to 120VAC power for electronic lighting.

1. Open lid(s) or remove cover(s) from burner(s) to be lit.
2. Turn all gas control knob(s) to their **OFF** position(s).
3. Turn on the gas at its source.

4. Depress the desired control knob for 5 seconds, then, while pressing turn it counterclockwise to the **HI LIGHT** position. Once the burner lights, release the knob.

**CAUTION:** If a burner does not light within five (5) seconds of turning on the control knob, depress the knob and turn it to the **OFF** position. **WAIT FIVE (5) MINUTES** before repeating step 4. If you smell gas, follow the instructions on the cover of this manual. If the burners still do not light after several attempts, refer to the instructions for manual lighting.

**MANUAL LIGHTING**

**CAUTION:** Always wait five (5) minutes for gas to clear after any unsuccessful lighting attempt.

1. Follow steps 1 through 3 (left).
2. Insert either a burning long-barrel butane lighter, a burning long-stem match, or a burning match held by a wire extension holder through the cooking grid opening to the top of the burner (Fig. 21-2).
3. While holding the match or lighter flame at the top of the burner, depress the control knob and while pressing turn it counterclockwise to the **HI LIGHT** position. Remove the lighter or match when the burner lights, and release the control knob.
4. If the burner does not light within five (5) seconds of turning the control knob, **immediately depress the knob and turn the valve to OFF.** **WAIT FIVE (5) MINUTES** before repeating steps 2 through 4 of the **MANUAL LIGHTING** instructions.

**SHUTTING OFF THE UNIT**

To shut off the unit, depress each valve control knob and while pressing turn it clockwise to the **OFF** position. Always close the valve from the gas supply after each use of the unit.

**WHEN USING A PORTABLE PROPANE TANK**

Propane tanks are equipped with a safety shutdown device that may cause low or no gas pressure/flame at the burners if operating and lighting instructions are not followed exactly. (See important note in the TROUBLESHOOTING section for more details.)

For your convenience and safety; when the control knob is in the on position, the gas flow indicator will change from blue to red. (Red indicates gas flow.) See Fig. 21-1.
ALLUMAGE DES INSTRUCTIONS (D’ALLUMAGE)

Lisez toutes les instructions avant l’allumage, et suivez ces instructions chaque fois vous lumière le unité.

ÉCLAIRAGE ÉLECTRONIQUE

Note: Le unité doit être relié à la puissance 120VAC pour l’éclairage électronique.

1. Ouvrez les couvercles ou enlevez les couvertures des brûleurs pour être Lit.
2. Tournez tous les boutons de commande de gaz à leurs positions de repos.
3. Allumez le gaz à sa source.

![Ilustración](Fig. 22-1 - bouton de commande)

4. Diminuez le bouton de commande désiré pendant 5 secondes, puis, et tout en pressant le tour il dans le sens contraire des aiguilles d’une montre dans la position LÉGÈRE de HI. Une fois que le brûler s’allume, libérez le bouton.

ATTENTION : Si un brûleur ne s’allume pas dans cinq (5) secondes d’allumer le bouton de commande, enfoncez le bouton et tournez-le à la position de repos. ATTENDEZ CINQ (5) MINUTES avant de répéter l’étape 4. Si vous sentez le gaz, suivez les instructions sur la couverture de ce manuel. Si les brûleurs ne s’allument toujours pas après que plusieurs tentatives, se rapportent aux instructions pour l’éclairage manuel.

ÉCLAIRAGE MANUEL

ATTENTION: Attendez toujours cinq (5) minutes le gaz pour se dégager après que n’importe quelle tentative non réussie d’éclairage.

1. Suivez les étapes 1 à 3 (à gauche).
2. Insérez un allumeur brûlant de butane de long-baril, une allumette brûlante de long-tige, ou une allumette brûlante tenue par un support de prolongation de fil par la grille à cuire s’ouvrant au dessus du brûler (fig. 22-2).
3. Tout en tenant l’allumette ou la flamme plus légère au dessus du brûler, diminuez le bouton de commande et tout en pressant le tour il dans le sens contraire des aiguilles d’une montre dans la position LÉGÈRE de HI. Enlevez l’allumeur ou assortissez quand le brûler s’allume, et libérez le bouton de commande.
4. Si le brûler ne se allume pas dans les cinq (5) secondes de tourner le bouton de commande, enfoncez immédiatement le bouton et tournez la valve à AU LOIN. ATTENDEZ CINQ (5) MINUTES avant de répéter les étapes 2 à 4 des instructions manuelles d’éclairage.

![Ilustración](Fig. 22-2 - Éclairage manuel)

ARRÊT DU UNITÉ

Pour couper le unité, diminuez chaque bouton de commande de valve et tout en pressant tour il dans le sens des aiguilles d’une montre à la position de repos.

Fermez toujours la valve de la fourniture de gaz après chaque utilisation du unité.

**En employant un réservoir de propane portatif**

Des réservoirs de propane sont équipés d’un dispositif d’arrêt de sûreté qui peut ne pas causer le bas ou aucunes pression de gaz/flamme aux brûleurs si le fonctionnement et l’allumage des instructions ne sont pas suivis exactement (voir la note importante dans la section de dépannage pour plus de détails.)

Pour votre convenance et sûreté ; quand le bouton de commande est dans la position de fonctionnement, l’indicateur d’écoulement de gaz changera de bleu en le rouge. (Le rouge indique l’écoulement de gaz.) Voir la Fig. 22-1.
The infrared (IR) searing burner cooks with a powerful radiant heat.

Light the infrared burner following the LIGHTING INSTRUCTIONS in this manual or printed on the drip tray. Follow these guidelines when operating the Infrared burner:

- **DO NOT** place food on the cooking grid until the IR burner glows orange (Fig. 23-2). Drippings are heated and evaporate instead of sticking to and impairing burner function.

- For cleaning purposes; always leave your burner on (after cooking) for an additional 5 minutes, to allow for a burnoff period. This is important to keep your burner clean and operating properly. As the burner is self cleaning (at full temperature); avoid the use of cleaners or abrasives.

- When not in use, *always* cover the infrared burner with the stainless-steel lid. This protects the burner from drippings (from other cooking), airborne particles, and foreign objects (Fig. 23-1).

- Do not strike or scratch the burner ceramic as it may chip, crack, or break (Fig. 23-1).

**Important:** When grilling with the infrared burner, always place a cooking grid above it.

**CAUTION:** Never attempt to operate the IR burner with the lid closed.

**WARNING**
Only handle the infrared burner cover when the unit is cold or with a well-insulated long-handled tool or heat resistant gloves.

Burner ceramic must be protected with cover when burner is not in use. Drips and particles evaporate before hitting infrared burner when cooking at the maximum setting.

To ensure proper operation, infrared burners must be operated on the HI setting for a minimum of 10 minutes. Thereafter, the flame may be lowered as desired.

**CAUTION:** Always monitor the infrared burner flame when operated on low, as it may blow out in high-wind conditions.
APPLIANCE MUST BE COMPLETELY COOL WHEN CLEANING. DO NOT SPRAY ANY CLEANER OR LIQUIDS ON THE APPLIANCE WHEN HOT.

The appliance must be cleaned as often as once a month (depending on use) to prevent grease build-up and other food deposits.

INTERIOR
THE BURNER SURFACE MUST BE KEPT CLEAN TO ENSURE PROPER IGNITION AND OPERATION.

Remove the burner (see orifice changing instructions) and inspect and clean the burner inlet for insects and nests. A clogged burner can lead to a fire in the bottom of the appliance.

The inside of the appliance may be cleaned periodically with oven cleaner if desired. Follow the oven cleaner instructions for proper use.

Be careful not to get oven cleaner on the outside surface of the appliance as it can permanently damage the finish.

EXTERIOR
Stainless steel surfaces when exposed to temperatures produced by the grilling process will change color. The stainless steel will change color from silver to brown and blue. This can be removed by using stainless steel cleaner.

Clean your appliance by first using grill cleaner to remove grease and dirt. Always wipe with the grain (See Fig. 24-1). Next, use stainless steel cleaner to restore the stainless steel color (Note: not for mirror finish). Finish by wiping your appliance down using polish wipes. To clean any mirror finish (if applicable), use a quality brand glass cleaner only, not any of the cleaners mentioned above.

If your appliance is installed in a seaside (salt air) or poolside (chlorine) location, it will be more susceptible to corrosion and must be maintained/cleaned more frequently. Do not store chemicals (such as chlorine or fertilizer) near your stainless steel appliance.

Due to the nature of stainless steel, surface iron oxide deposits may appear. Do not be alarmed – these deposits are removable with stainless steel cleaner through prompt and periodic maintenance. If not attended to promptly, permanent pitting may occur.

By following these recommendations, you will enjoy the beauty and convenience of your appliance for many years to come.

PROTECTING YOUR APPLIANCE FROM THE WEATHER
An optional cover will protect your appliance when not in use. (Allow to cool before covering.) Please specify the model number and serial number of your appliance when ordering a cover.

IMPORTANT
IN THE EVENT OF A GREASE FIRE, IMMEDIATELY SHUT OFF THE MAIN GAS VALVE TO THE UNIT. KEEP THE LID OPEN AND ALLOW THE FIRE TO EXTINGUISH ITSELF. A THOROUGH INSPECTION BY A TRAINED SERVICE TECHNICIAN SHOULD BE CONDUCTED BEFORE FUTURE USE OF YOUR UNIT. THE SERVICE TECHNICIAN WILL CHECK THE SYSTEM FOR GAS LEAKS AND WILL CHECK ALL ELECTRICAL WIRING FOR DAMAGE. ALL GAS LEAKS AND WIRING MUST BE REPAIRED PRIOR TO FUTURE USE.
CONVERT GAS TYPE / CHECK BURNER ORIFICES

CAUTION: Make sure the unit is at a safe temperature and is isolated from gas and electrical supplies before beginning.

For your safety, exercise caution, and make sure you have adequate hand protection, such as gloves, when handling metal parts.

CONVERT LABEL

This unit comes from the factory configured for one type of gas as marked on the label behind the control panel.

When the unit is converted, the label for the new gas (included at original shipping) MUST be applied over the old label mentioned above.

CONVERT REGULATOR

The gas regulator, located behind the control panel, must be set for the type of gas used to fuel the unit. To check the regulator setting, remove the cap in the center of the regulator (Fig. 25-1, A). Holding the cap vertical (see Fig. 25-2, B), the letters at the bottom of the plastic stalk indicate the gas type for which the regulator is currently configured.

If the text on the bottom of the regulator stalk does not match the gas type connected to the unit, remove the stalk from the cap, invert, and replace into center of cap. Replace cap on the regulator, screwing down until snug.

CONVERT GAS ORIFICES

When converting the unit to a different gas type, the burner's orifice must be replaced with the corresponding orifice for the new gas.

See MODEL SPECIFICATIONS TABLE, Table 1 at the beginning of this document to determine the proper orifice size for the burner.

Important: It is critical to the operation of the burner that its orifice be fully inserted into the center of its orifice opening.

WARNING

HAZARDOUS OVERHEATING WILL OCCUR IF A NATURAL-GAS ORIFICE IS USED WITH PROPANE GAS.

CONNECT TO NEW GAS SUPPLY

Plumb the unit as appropriate for the new gas supply. (Additional components may be needed for your specific setup.) Be sure to leak test at all connections.
CONVERT/GAS TYPE / CHECK BURNER ORIFICES (cont.)

CONVERT/CHECK SEARING STATION BURNER ORIFICE

1. Remove the Searing Station lid and lift off the cooking grid.
2. Remove the control panel. See the CONTROL PANEL REMOVAL section for details.
3. Carefully lift the burner up, allowing the tabs to clear the slots in the rear burner rest. Slowly pull the gas-supply tube away from the orifice located inside the circular opening in the front firewall of the unit. (See Fig. 26-1 and Fig. 26-2.)

Note: The igniter wire length provides for the burner to be removed allowing access to the orifice. Should the burner need to be completely removed; the igniter must be unscrewed.

4. Using a \( \frac{3}{8} \)" socket, remove the orifice from the orifice holder (see Fig. 26-3) and check the number stamped on the face.
5. If an orifice change is necessary, replace the orifice with the correct-size.
6. Replace the gas-supply tube over the orifice, aligning the burner into the rear burner rest. Re attach the electrode wire.
7. Replace the control panel. Replace the drip tray, bezel, control knob, cooking grid, and lid.
Please use this page to record any information about your unit that you may want to have at hand.
CONTROL PANEL REMOVAL

To remove the control panel:

1. Turn the control knob to the OFF position and turn off the gas supply to the unit.
2. Remove the drip tray.
3. Turn off the light switch and disconnect the power supply from the power source.
4. Pull the control knob from the stem and set aside.
5. Slowly lift away the lighted bezel to clear the valve stem, and carefully disconnect the wire found on the back of the bezel (use your fingernail). See Fig. 28-1.
6. Using a Phillips screwdriver, unscrew and remove the control panel fastener screws and washers (located on the left and right front face of the control panel). Retain the screws for later re-installation.
7. Carefully open the control panel by lifting and pulling the control panel from the frame.

**Important:** When opening, take caution to not damage any wiring.

8. If wire disconnections are required, reference the wire diagram in the MODEL SPECIFICATIONS section in this instruction manual or the wire diagram label affixed to the inside of the control panel.

**Note:** Secure any disconnected wires (coming from the inside of the unit) to prevent them from falling in.

**Note:** Whenever reconnecting any wires, apply a small amount of dielectric grease to the male connector, then make the connection.

**Important:** During reinstallation; prior to opening the gas shutoff valve, be sure the control knob is in the OFF position.
TROUBLESHOOTING

If you have trouble with this Fire Magic® unit, please use this list to identify the problem. By trying one or more of the solutions to the possible cause, you should be able to solve the problem. If this list does not cover your present problem, or if you have other technical difficulties with the unit, please contact your local Fire Magic® dealer or visit our web site at www.rhpeterson.com.

* Important: Propane tanks are equipped with a safety shutdown device that may cause low or no gas/flame at the burners if operating and lighting instructions are not followed exactly. If you suspect the propane tank safety shutoff is in effect, shut off all burner control valves and the propane tank valve. Then read and follow the LIGHTING INSTRUCTIONS exactly. Lighting instructions are located in your owner’s manual and printed on the unit’s metal drip tray. If the problem persists, continue troubleshooting, or contact your local dealer or R. H. Peterson for assistance.
Robert H. Peterson Co. (“RHP”) warrants your Fire Magic® grill to be free from defects in material and workmanship.

Fire Magic® cast stainless-steel burners, stainless-steel rod cooking grids, and stainless-steel housings are warranted for as long as you own your Fire Magic® grill -- LIFETIME. (Except as noted below.)

Fire Magic Choice stainless steel tubular burners are warranted for TWENTY (20) YEARS.

Fire Magic® cast brass burners, brass valves, inner liners, manifold assemblies, and backburner assemblies (except ignition parts) are warranted for FIFTEEN (15) YEARS.

Fire Magic® Electric Grills, including stainless steel grid, and housings are warranted for TEN (10) YEARS.

Fire Magic® Infra-red burners, flavor grids, Charcoal stainless steel grills, and Smokers are warranted for FIVE (5) YEARS; except for the charcoal pan, charcoal grid, wood pellet screen, thermometer, and ash tray; which are warranted for ONE (1) YEAR.

Fire Magic® sideburners and all other Fire Magic® grill components (except ignition and electronic parts) are warranted for THREE (3) YEARS.

Fire Magic® ignition systems (excluding batteries), electronic components (including lights and thermometers), and grill accessories are warranted for ONE (1) YEAR.

A COPY OF YOUR SALES SLIP FOR PROOF OF PURCHASE IS REQUIRED

This warranty applies to the original purchaser for products which are installed in the United States or Canada and which are operated and maintained as intended for single family residential usage. This warranty is valid only with proof of purchase, shall commence on the date of purchase, and shall terminate (both as to original and any replacement products) on the anniversary date of the original purchase of the product stated on the above schedules.

This warranty covers defects in material and workmanship. This warranty does not cover parts which become defective as a result of negligence, misuse, use not in compliance with the Owner’s Manual/Instruction Instructions, accidental damage, improper handling, improper storage, improper installation, lack of required routine maintenance (as specified in the Owner’s Manual/Instruction Instructions), electrical damage, local gas impurities or failure to protect against combustibles. Product must be installed (and gas must be connected) as specified in the Owner’s Manual/Instruction Instructions by a qualified professional installer. Modifications to products which are not specifically authorized will void this warranty. Accessories, parts, valves, remotes, etc. when used must be Peterson products or this warranty is void. Warranted items will be repaired or replaced at Peterson’s sole discretion. This warranty does not apply to rust, corrosion, oxidation, or discoloration unless the affected part becomes inoperable.

This warranty does not cover labor or labor related charges, except as provided by separate specific written programs from the Peterson Co. All repair work must be performed by a qualified professional service person and requires prior approval of Peterson.

Peterson may require the defective product or part to be returned to the factory to determine the cause of failure. Peterson will pay freight charges if the product or part is determined to be defective. This warranty does not cover breakage in shipment from our (Independent) distributor to its customer if the damage is determined to have occurred during that shipment.

This warranty specifically excludes liability for indirect, incidental, or consequential damages. Some states and provinces do not allow the exclusion or limitation of incidental or consequential damages, so the above exclusion may not apply to you. This warranty gives you specified legal rights, and you may have other rights that vary from state to state or province.

For additional information regarding this warranty, or to place a warranty claim, contact the R. H. Peterson dealer where the product was purchased.

TO REGISTER YOUR PRODUCT ONLINE GO TO: WWW.RHPETE RSON.COM, AND CLICK ON PRODUCT REGISTRATION. THANK YOU FOR YOUR PURCHASE.
