IMPORTANT: READ THESE INSTRUCTIONS CAREFULLY BEFORE STARTING INSTALLATION OR USE.

WARNINGS AND SAFETY CODES

**DANGER:**
IF YOU SMELL GAS:
1. Shut off the gas to the appliance.
2. Extinguish any open flame.
3. Open lid.
4. If odor continues, keep away from the appliance and **immediately** call your gas supplier or the fire department.

**WARNING:**
1. Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.
2. An LP cylinder not connected for use shall not be stored in the vicinity of this or any other appliance.

CODE AND SUPPLY REQUIREMENTS: This griddle must be installed in accordance with local codes and ordinances, or, in the absence of local codes, with the latest National Fuel Gas Code (ANSI Z223.1/NFPA 54), or Natural Gas and Propane Storage and Handling Installation Code (CSA-B149.1).

This appliance and its dedicated manual shutoff valve must be disconnected from the gas-supply piping system when testing the system at pressures in excess of ½ psig (3.5 kPa).

This appliance must be isolated from the gas-supply piping system by closing its dedicated manual shutoff valve during any pressure testing of the gas-supply system at pressures up to and including ½ psig (3.5 kPa).

Proper operation of your griddle requires prompt and periodic maintenance. See the SERVICING AND CLEANING section for details.

Robert H. Peterson Co. • 14724 East Proctor Avenue • City of Industry, CA 91746
IMPORTANT : LISEZ CES INSTRUCTIONS SOIGNEUSEMENT AVANT DE COMMENCER L'INSTALLATION OU L'UTILISATION

SÛRETÉ ET CODES D'AVERTISSEMENT

DANGER:

SI VOUS SENTEZ LE GAZ :
1. Coupez le gaz à l’appareil.
2. Éteignez-vous n’importe quelle flamme nue.
3. Ouvrez le couvercle si équipé d’un four.
4. Si l’odeur continue, gardez loin de l’appareil et appelez immédiatement votre département de fournisseur ou de feu de gaz.

AVERTISSEMENT:

1. Ne stockez pas ou n’employez pas l’essence ou d’autres vapeurs et liquides inflammables à proximité de ceci ou d’aucun autre appareil.
2. Un cylindre de propane non relié pour l’usage ne sera pas stocké à proximité de ceci ou d’aucun autre appareil.

CONDITIONS DE CODE ET D’APPROVISIONNEMENT:

Ce gril doit être installé selon des codes et des ordonnances locaux, ou, en l’absence des codes locaux, avec l’un ou l’autre le plus défunt Code national de gaz de carburant (norme ANSI Z223.1/NFPA 54), et Stockage de gaz naturel et de propane et manipulation du code d’installation (CSA-B149.1).

Cet appareil et ses différents robinets d’isolement doivent être démontés du gaz-fournissent le système sifflant en examinant le système aux pressions au-dessus du ½ psig (kPa 3.5).

Cet appareil doit être isolé dans gaz-fournissent le système sifflant par fermeture que ses différents robinets d’isolement manuels pendant tous les essais sous pression du gaz-fournissent le système aux pressions jusques et y compris le ½ psig (kPa 3.5).

- Ce gril est pour utilisation à l’extérieur seulement. Si l’appareil est entreposé à l’intérieur, enlever les bouteilles et les laisser à l’extérieur.
- Ne pas ranger le gril immédiatement après l’avoir utilisé. Le laisser refroidir avant de le déplacer ou de la ranger. Le non respect de cette mesure de sécurité pourrait entraîner un incendie causant des dommages à la propriété, des blessures ou la mort.
- Ne pas utiliser cet appareil sous une surface combustible.
- Ne pas utiliser cet appareil sous un auvent. Le non respect de cette mesure de sécurité pourrait entraîner un incendie ou des blessures.
- Dégagement minimal entre les parois latérales et l’arrière de l’appareil et la construction combustible (45.7 cm à partir des parois latérales et 45.7 cm à partir de l’arrière).
- Le régulateur de pression de gaz prévu avec cet appareil de cuisson à gaz pour l’extérieur doit être utilisé. Ce régulateur est réglé pour une pression de sortie de 5 pouces de colonne de l’eau pour le gaz naturel, et 10 pouces pour le propane.
- LE RÉGULATEUR INCLUS D’APPAREILS EST ÉVALUÉ POUR LE MAXIMUM DE 1/2 (LIVRES PAR POUCE CARRÉ). SI VOTRE OFFRE DE GAZ EST 1/2 PLUS GRAND QUE (LIVRES PAR POUCE CARRÉ), UN RÉGULATEUR ADDITIONNEL DOIT ÊTRE INSTALLÉ AVANT LE GRIL. VOIR LA SECTION DE CONDITIONS D’OFFRE DE GAZ POUR LA PRESSION APPROPRIÉE D’OFFRE DE GAZ.
- Ne couvrez jamais la surface entière de cuisine ou de grill de gauffreuses ou de casseroles. La surchauffe se produira et les brûleurs ne seront pas très performants quand la chaleur de combustion est emprisonnée au-dessous de la surface à cuire.
- Ne pulvérissez jamais l’eau sur une unité chaude de gaz, comme ceci peut endommager des composants de porcelaine ou de fer de fonte.
- Une fuite de GPL peut causer une incendie ou une explosion si enflammée entraînant des blessures corporelles graves ou la mort.
- Communiquez avec le fournisseur de GPL pour les réparations ou pour disposer de qules bouteille ou du GPL non utilisé.

Toutes les sorties électriques à proximité du gril doivent être correctement fondues selon des codes locaux, ou en l’absence de local code, avec le code électrique national, ANSI/NFPA 70, ou le code électrique canadien, CSA C22.1, celui qui est applicable.

Certifiée à la norme ANSI : Z21.58 / CSA 1.6

INSTALLATEUR : Laissez ces instructions avec le consommateur. CONSOMMATEUR : Maintenez pour la future référence.
1. The outdoor appliance and surrounding area MUST remain clear of flammable substances such as gasoline, yard debris, wood, etc.

2. Do not block the 1” front air inlet along the bottom of the control panel. See the COMBUSTION AIR AND COOLING AIRFLOW section under INSTALLATION REQUIREMENTS for details.

3. This unit must be installed so that the required vent openings and surrounding area of the unit enclosure remain clear and free at all times. See the GRIDDLE ENCLOSURE/VENTILATION REQUIREMENTS section for details.

4. When using propane gas: the propane cylinder, regulator, and rubber hose must be in a location not subject to temperatures above 125°F (51°C).

5. The griddle lid must be removed before using unit.

6. The flames on each burner burn evenly along the entire burner with a steady flame (mostly blue). The unit has burner flame viewing cutouts to observe the burner flames (see IDENTIFICATION OF GRIDDLE CONTROLS section). If burner flames are not normal, check and clean the orifice and burner/venturi tubes for insects and insect nests. A clogged tube can lead to a fire beneath the unit. A proper flame pattern will ensure safe operation and optimal performance. Adjust the air shutter as needed (see AIR SHUTTER ADJUSTMENT section).

7. The in-line gas valve or gas cylinder valve must always be shut OFF when the unit is not in use.

8. The drip collector trough holes must be clear and unobstructed. Excessive grease deposits can result in a grease fire.

9. Whenever reconnecting any wires, apply a small amount of dielectric grease to the male connector, then make the connection. This will ensure conductivity and prevent moisture from affecting the contact.

10. Wear gloves and use extreme caution whenever installing and handling this product and its accessories as certain components have sharp edges that can cause personal injury.

CAUTION: FOR YOUR SAFETY, you must provide openings in the griddle enclosure for replacement air and ventilation (in case of possible leakage from gas connections or propane cylinders). Failure to do so may result in a fire or explosion causing property damage, bodily injury, or death. See the GRIDDLE ENCLOSURE / VENTILATION REQUIREMENTS section for details.

IMPORTANT
IN THE EVENT OF A GREASE FIRE, IMMEDIATELY SHUT OFF THE MAIN GAS VALVE TO THE UNIT. ALLOW THE FIRE TO EXTINGUISH ITSELF. KEEP AT A SAFE DISTANCE. A THOROUGH INSPECTION BY A QUALIFIED PROFESSIONAL SERVICE TECHNICIAN SHOULD BE CONDUCTED BEFORE FUTURE USE OF YOUR UNIT. THE SERVICE TECHNICIAN WILL CHECK THE SYSTEM FOR GAS LEAKS AND WILL CHECK ALL ELECTRICAL WIRING FOR DAMAGE. ALL GAS LEAKS AND WIRING MUST BE REPAIRED PRIOR TO FUTURE USE.

The unit serial number tag can be found affixed to the griddle body behind the control panel (on an aluminum tag) and on the underside of the drip tray handle (on a thermal label). It is recommended that the drip tray first be removed and cleaned / emptied of its contents, then turned over to view. The unit rating label is located inside of the control panel.

ELECTRICAL CONNECTIONS
A 120VAC (15 AMP minimum) GFCI GROUNDED 3-wire receptacle (not included) is required within the vicinity of the unit to provide power to it. The GFCI receptacle must be a WEATHER-PROOF IN-USE COVERED RECEPTACLE.

• Observe the National Electric Code and all local codes.

• Verify proper polarity of the receptacle.

• If an extension cord is used, ensure it is a 3-wire GROUNDED cord that is rated for the power of the equipment, and is approved for outdoor use with a W-A marking. DO NOT use 2-prong adapters.

• DO NOT TAMPER WITH THE EXTENSION CORD OR THE UNIT POWER-SUPPLY CORD.
WARNING

This gas appliance, its enclosure, and the propane cylinder enclosure, if any, **MUST** be plumbed and vented in accordance with local building and safety codes and should be approved by local code enforcement officials. This appliance **MUST** be installed and operated according to the information below.

**FAILURE TO PROPERLY VENT THE GRIDDLE ENCLOSURE MAY RESULT IN A FIRE OR EXPLOSION CAUSING PROPERTY DAMAGE, BODILY INJURY, OR DEATH.**

A leaking gas connection or valve unintentionally left open will create a hazard.

**WHEN USING PROPANE GAS**

- **Propane gas** (also known as **L.P. gas**) is **heavier than air** and will **accumulate or pool** in an inadequately vented enclosure or recessed area.

- If a pool of **propane gas** is ignited, an explosion will occur. Adequate venting at the floor level, or the lowest point where gas could accumulate, will eliminate this danger.
  
  Refer to the **GRIDDLE ENCLOSURE / VENTILATION REQUIREMENTS** section.
  
  Observe all local codes.

- **DO NOT** store a spare propane-gas cylinder under or near the **griddle** enclosure.

**WHEN USING NATURAL GAS**

- **Natural gas** is **lighter than air** and will **accumulate** at the top of an inadequately vented enclosure.

- If an accumulation of **natural gas** is ignited, an explosion will occur. Adequate venting at the top of the enclosure, or the highest point where gas could accumulate, will eliminate this danger.
  
  Refer to the **GRIDDLE ENCLOSURE / VENTILATION REQUIREMENTS** section.
  
  Observe all local codes.

**INSTALLATION SAFETY GUIDELINES**

**THIS UNIT MUST BE INSTALLED SO THAT THE REQUIRED VENT OPENINGS AND SURROUNDING AREA OF THE GRIDDLE ENCLOSURE REMAIN CLEAR AND FREE AT ALL TIMES.** See the **GRIDDLE ENCLOSURE / VENTILATION REQUIREMENTS** section for details.

**CAUTION:** **FOR YOUR SAFETY,** you must provide openings in the griddle enclosure for replacement air and ventilation (in case of possible leakage from gas connections or propane cylinders). **Failure to do so may result in a fire or explosion causing property damage, bodily injury, or death.** See the **GRIDDLE ENCLOSURE / VENTILATION REQUIREMENTS** section for details.

The gas cylinder, regulator, and rubber hose must be in a location not subject to temperatures above **125° F (51° C).**

**IF A PROPANE CYLINDER IS INSTALLED INSIDE OF THE GRIDDLE ENCLOSURE, THE GUIDELINES FOUND IN THE **GRIDDLE ENCLOSURE / VENTILATION REQUIREMENTS** SECTION MUST BE FOLLOWED.**

**OPERATING THE UNIT SAFELY AND CORRECTLY**

Every time you use the unit, **make sure that:**

1. The area around the griddle enclosure is clear and free from combustible materials, gasoline and flammable vapors/liquids.

2. There is no blockage of the airflow through the vent openings located on the griddle enclosure.

3. The hose is inspected (if applicable). See **SAFE USE & MAINTENANCE OF PROPANE-GAS CYLINDERS** section.

**DO NOT** store any combustible materials, gasoline, and any other flammable vapors/liquids in the vicinity of the unit. Provide adequate clearance for servicing and operation.
**UTILISATION SÛRE ET ENTRETIEN DES CYLINDRES DE GAZ DE PROPANE**

**IMPORTENT POUR VOTRE SÛRETÉ**

LISEZ ET SUIVEZ TOUS LES AVERTISSEMENTS ÉQUIPÉS DE VOTRE CYLINDRE DE GAZ DE PROPANE.

En actionnant cet appareil avec un cylindre de gaz de propane ON DOIT observer ces instructions et avertissements.

**LE MANQUE DE FAIRE AINSI PEUT AVOIR COMME CONSÉQUENCE UNE INCENDIE OU UNE EXPLOSION SÉRIEUSE.**

**CYLINDRE ET CONDITIONS ET CARACTÉRISTIQUES DE CONNECTEUR**

- a. Des cylindres et les valves de gaz de propane doivent être maintenus en bon état et doivent être remplacés s’il y a des dommages évidents au cylindre ou à la valve.
- b. Ce unité, une fois utilisé avec un cylindre, devrait être relié à un gallon de la norme 5 (20lb.) cylindre de gaz de propane équipé d’un OPD (remplissez au-dessus du niveau le dispositif d’empêchement). L’OPD a été exigé sur tous les cylindres vendus depuis octobre 1.1998 pour empêcher le remplissage excessif.
- c. Les dimensions de cylindre devraient être approximativement 12”(30.5cm) de diamètre et 18” (45.7cm) hauts. Des cylindres doivent être construits et marqués selon les caractéristiques pour des cylindres de gaz de propane du département des ETATS-UNIS du transport (D.O.T) ou le niveau national du Canada, du CAN/CSA-B339, des cylindres, des sphères et des tubes pour le transport des marchandises dangereuses.
- d. Le cylindre doit inclure un collier pour protéger la valve de cylindre et le circuit d’alimentation de cylindre doit être assuré le retrait de vapeur.
- e. Le régulateur de pression et l’ensemble de tuyau utilisé doivent assortir les spécifications pour le type I par ANSI Z 21.58/CGA 1.6 (voir la figure. 6-1).
- f. La valve de cylindre de gaz de propane doit être équipée d’un dispositif d’accouplement de raccordement de cylindre, décrit comme type I dans la norme définie dans le e. de paragraphe ci-dessus. Ce dispositif est généralement décrit comme coupleur rapide de fil de point culminant.
- g. Si votre cylindre de gaz de propane vient avec une prise de la poussière, placez le bouchon anti-poussière sur la sortie de valve de cylindre toutes les fois que le cylindre n’est pas en service.

**OPÉRATION DE COUPLEUR RAPIDE**

**Pour relier le regulator/hose à l’ajustage de précision de valve de cylindre de gaz de propane:** Serrez l’écrou de main sur le régulateur au-dessus de l’ajustage de précision de fil de point culminant sur la valve de cylindre. Tournez l’écrou de main dans le sens des aiguilles d’une montre pour engager les fils et pour serrer jusqu’à ce que douillettement. L’utilisation des pinces ou de la clé ne devrait pas être nécessaire. Seulement le propane marqué par cylindres doit être employé.

**Pour débrancher:** Tournez l’écrou de main dans le sens contraire des aiguilles d’une montre jusqu’à isolé (fig. 6-1).

**Important:** Avant d’employer le unité, et ensuite chaque fois que le cylindre est enlevé et rattaché, examinez tous les raccordements pour déceler les fuites. Arrêtez les valves de unité et ouvrez la valve principale de cylindre, puis vérifiez les raccordements avec de l’eau savonneux. Réparez toutes les fuites avant d’allumer le unité.

**ATTENTION:** Tournez toujours la valve principale de cylindre de propane au loin après chaque utilisation, et avant de déplacer le unité et le cylindre, ou débrancher l’accouplement. Cette valve doit rester fermée et le cylindre a débranché alors que l’appareil n’est pas en service, quoique l’écoulement de gaz soit arrêté par un dispositif de sûreté quand le coupleur est débranché.

Inspectez soigneusement l’ensemble de tuyau chaque fois avant que le gaz soit allumé. Un tuyau fissuré ou effiloché doit être immédiatement remplacé.

Si l’appareil est stocké à l’intérieur, le cylindre doit être disconnected et a enlevé. Des cylindres Disconnected doivent être stockés dehors, hors de la portée des enfants, avec les prises de valve filetées étroitement installées, et ne doivent pas être stockés dans un bâtiment, le garage, ou n’importe quel autre secteur inclus.

**POUR VOTRE SÛRETÉ**

- a. Ne stockez pas un cylindre de gaz disponible de propane dessous ou ne vous approchez pas de cet appareil.
- b. Ne remplissez jamais cylindre au delà de 80 pour cent de plein.
- c. Si l’INFORMATION DANS “A” ET “B” N’EST PAS SUIVIE EXACTEMENT, UN FEU CAUSANT LA MORT OU DES DOMMAGES ÉVIDENTS PEUVENT SE PRODUIRE.

Fig. 6-1 type coupleur rapide de fil de point culminant d’1

Voir la section GRIDDLE ENCLOSURE / VENTILATION REQUIREMENTS.
SAFE USE & MAINTENANCE OF PROPANE GAS CYLINDERS

IMPORTANT FOR YOUR SAFETY
READ AND FOLLOW ALL WARNINGS PROVIDED WITH THE PROPANE-GAS CYLINDER.
When operating this appliance with a propane-gas cylinder, these instructions and warnings MUST be observed.
FAILURE TO DO SO MAY RESULT IN A SERIOUS FIRE OR EXPLOSION.

CYLINDER/CONNECTOR REQUIREMENTS

a. Propane-gas cylinders, valves, and hoses must be maintained in good condition and must be replaced if there is visible damage to either the cylinder or valve. If the hose is cut or shows excessive abrasion or wear, it must be replaced before using the gas appliance (see e.).

b. This unit, when used with a cylinder, should be connected to a standard 5-gallon (20 lb.) propane-gas cylinder equipped with an OPD (Overfill Prevention Device). The OPD has been required on all cylinders sold since October 1, 1998, to prevent overfilling.

c. Cylinder dimensions should be approximately 12" (30.5 cm) in diameter and 18" (45.7 cm) high. Cylinders must be constructed and marked in accordance with the Specifications for Propane Gas Cylinders of the U.S. Department of Transportation (D.O.T.) or the National Standard of Canada, CAN/CSA-B339, Cylinders, Spheres, and Tubes for Transportation of Dangerous Goods.

d. The cylinder used must include a collar to protect the cylinder valve, and the cylinder supply system must be arranged for vapor withdrawal.

e. The pressure regulator and hose assembly used must match the specification for Type I by ANSI Z21.58/CGA 1.6 (see Fig. 7-1).

f. The propane-gas cylinder valve must be equipped with a cylinder connection coupling device, described as Type I in the standard defined in paragraph e. above. This device is commonly described as an Acme thread quick coupler.

g. If the propane-gas cylinder comes with a dust plug, place the dust cap on the cylinder valve outlet whenever the cylinder is not in use.

QUICK COUPLER OPERATION
To connect the regulator/hose assembly to the propane-gas cylinder valve fitting: Press the hand nut on the regulator over the Acme thread fitting on the cylinder valve. Turn the hand nut clockwise to engage the threads and tighten until snug. The use of pliers or a wrench should not be necessary. Only cylinders marked “propane” may be used.

To disconnect: Turn the hand nut counterclockwise until detached (Fig. 7-1).

Important: Before using the unit, and after each time the cylinder is removed and reattached, check all connections for leaks. Turn off the unit valves and open the main cylinder valve, then check connections with soapy water. Repair any leaks before lighting the unit.

CAUTION: Always turn the propane cylinder main valve off after each use, and before moving the unit and cylinder or disconnecting the coupling. This valve must remain closed and the cylinder disconnected while the appliance is not in use, even though the gas flow is stopped by a safety feature when the coupler is disconnected.

Carefully inspect the hose assembly each time before the gas is turned on. A cracked or frayed hose must be replaced immediately.

If the appliance is stored indoors, the cylinder must be disconnected and removed. Disconnected cylinders must be stored outdoors, out of the reach of children, with threaded valve plugs tightly installed, and must not be stored in a building, garage, or any other enclosed area.

FOR YOUR SAFETY

a. DO NOT store a spare propane-gas cylinder under or near this appliance.

b. NEVER fill the cylinder beyond 80-percent full.

c. IF THE INFORMATION IN a. AND b. IS NOT FOLLOWED EXACTLY, A FIRE CAUSING DEATH OR SERIOUS INJURY MAY OCCUR.

For propane ventilation and enclosure requirements, see the GRIDDLE ENCLOSURE / VENTILATION REQUIREMENTS section.
Fire Magic GFRC islands are available. They meet all enclosure and ventilation requirements. For requirements regarding custom-built enclosures, see below.

VENTILATION (ALL ENCLOSURES)

For All Piping Systems and All Gas Types:
(Natural Gas, Household Propane, L.P. Cylinder)

FOR YOUR SAFETY, you must provide the openings listed below for replacement air and ventilation of the griddle enclosure (in case of possible leakage from gas connections or L.P. cylinders). Failure to do so may result in a fire or explosion causing property damage, bodily injury, or death.

One side of the enclosure shall be left completely open to the outside; OR 4 (minimum) ventilation openings MUST be created (reference Fig. 8-1 and Fig. 8-2):

- Each opening must have a minimum of 10 sq. in. of free area. The openings must be equally sized. (Total of 40 sq. in. free area.)
- Two openings must be in the side walls of the enclosure, at the top level, and spaced at a minimum of 90 degrees. The openings must begin 1" or less below the countertop level and end no more than 5" below the countertop level.
- Two openings must be in the side walls of the enclosure, at the floor level, and spaced at a minimum of 90 degrees. The openings must begin 1" or less above the floor level and end no more than 5" above the floor level.
- The openings must remain unobstructed:
  The clearance between the openings and any items outside of the enclosure is a minimum of 6". The clearance between the openings and any items within the enclosure is a minimum of 2". See Fig. 8-2.

When an L.P. cylinder is used in the enclosure, additional requirements exist, see the following section.

It is acceptable to use RHP venting panels (PN 5510-01). Contact your dealer.

KEEP THE REQUIRED VENT OPENINGS AND SURROUNDING AREA OF THE ENCLOSURE CLEAR AND FREE AT ALL TIMES.

WARNING: Ventilation openings in side walls shall not communicate directly with other enclosures of the outdoor cooking gas appliance.
WHEN A PROPANE (L.P.) CYLINDER IS USED IN THE ENCLOSURE

When a propane (L.P.) cylinder is installed inside of the enclosure, the additional guidelines below MUST be followed. FAILURE TO DO SO MAY CAUSE DAMAGE TO YOUR UNIT AND/OR PERSONAL INJURY. Reference Fig. 9-1 and 9-2 for an example.

- Only a C.S.A. listed stainless steel connector can be connected to the unit.
- The regulator/hose assembly coming from the cylinder can only be connected to the above mentioned flex connector. DO NOT connect the regulator/hose assembly directly to the unit. An adapter will be required.
- A non-combustible heatshield must be installed to protect the regulator/hose assembly and cylinder valve.
- The cylinder must rest at least 2" above the ground.
- An additional vent opening is recommended in the access door near the cylinder and at the gas connection level (minimum 10 sq. in. of free area).

RHP offers an "access door with tank tray and louvers" which includes a heatshield that rests directly above the L.P. cylinder, a tray, and louvers to meet the cylinder install requirements. The door is shown in Fig. 9-3. Contact your dealer for ordering information.

Fig. 9-1 L.P cylinder orientation

Fig. 9-2 Additional ventilation opening for L.P. cylinder

Fig. 9-3 Optional door w/ tank tray & louvers
Installation must be performed by a qualified professional service technician.

This unit is designed for outdoor use only. **DO NOT** use this unit inside a building, garage, or enclosed area. **DO NOT** use this unit in or on a recreational vehicle or boat.

**The unit must have a minimum clearance of 18” from combustible materials/items in all directions.**

**OVERHEAD CONSTRUCTION AND EXHAUST HOOD REQUIREMENTS**

A minimum 5 foot clearance is required between the countertop and the overhead construction.

When installed under combustible overhead construction, the area above the cooking surface of the unit **must** be covered with an exhaust hood. The exhaust hood provides the protection for the combustible overhead construction. See exhaust hood information below and Fig. 10-1.

**Important:** **DO NOT** use this appliance under unprotected combustible overhead construction.

When installed under overhead non-combustible construction, an exhaust hood is highly recommended; see exhaust hood information below and Fig. 10-1.

**Exhaust Hood**

When using an exhaust hood, the area above the cooking surface of the griddle must be covered with a hood larger than the cooking area of the griddle, and with a minimum of 1200 CFM (cubic feet per minute) for proper outdoor application.
SIDE AND REAR WALL CLEARANCES

For the minimum clearances between the unit and any side or rear walls, your setup must fall within one (or more) of the following:

A. Clearance between unit and strictly non-combustible wall
   (i.e. brick wall, see Fig. 11-1)
   • The unit must have a minimum of 4" right, left, and rear clearance from any non-combustible wall.
     (To allow for proper ventilation and prevent dangerous overheating.)

B. Clearance between unit and a protected combustible wall
   (i.e. a non-combustible wall in front of a combustible wall to serve as a barrier. This can be accomplished by brick, or a metal stud finished with non-combustible substrate, see Fig. 11-2)
   • The unit must have a minimum of 14" right, left, and rear clearance from the protected combustible wall.
     (The 4" non-combustible material plus an additional 10" clearance between the unit and protected wall.)

C. Clearance between unit and combustible wall
   • The unit must have a minimum of 18" right, left, and rear clearance from any combustible wall (see Fig. 11-3).

BACKSPLASH CLEARANCE (if applicable)

If a non-combustible backsplash exists, it must have a minimum of a 4" clearance from the rear of the unit (to allow for proper ventilation and prevent dangerous overheating). See Fig. 11-4.

Important: This 4" backsplash clearance must first be met prior to any non-combustible walls beginning behind it.
The control panel **MUST** remain removable for servicing (see CONTROL PANEL REMOVAL section).

**COMBUSTION AIR AND COOLING AIRFLOW**

Proper airflow (front-to-back, Fig. 12-1) **MUST** be maintained for the unit to perform as it was designed. If airflow is blocked, overheating and poor combustion will result. Do not block the 1" front air inlet along the bottom of the control panel.

**CAUTION:** Wind blowing into or across the rear vent (Fig. 12-3) can cause poor performance and/or dangerous overheating. Install the griddle so that the prevailing wind blows toward the front of the griddle (Fig. 12-2).

**GAS-SUPPLY PLUMBING REQUIREMENTS**

For natural gas or a household propane system, rigid 1/2" or 3/4" black steel pipe or local code-approved pipe is required to conduct the gas supply to the unit. Contact your local gas supplier. Connect this pipe to the required C.S.A.-approved stainless-steel flex connector (attached). An NPT adapter has been provided for 1/2" pipe. **DO NOT use a rubber hose within the unit enclosure.** Apply only joint compounds that are resistant to all gasses to all male pipe fittings except flare fittings. Make sure to tighten every joint securely.

**Note:** If 1/2" pipe is used with **natural gas**, it should be no longer than 20'.

**Important:** A shut-off valve (not included) in the gas line is required. It provides for safety when the unit is not in use and for convenient maintenance and repair. It must be installed within 6 feet of the unit. Use a pipe joint compound resistant to all gasses on all male fittings except flare fittings.

**GAS SUPPLY AND MANIFOLD PRESSURES:**

For **natural gas** - normal 7" water column (w.c.), minimum 5", maximum 10 1/2". For **propane gas** - normal 11" w.c., minimum 10", maximum 13".
ELECTRICAL SAFETY

• To protect against electric shock, do not immerse cord or plugs in water or other liquid.
• Unplug from the outlet when not in use and before cleaning. Allow to cool before putting on or taking off parts.
• Do not operate any outdoor cooking gas appliance with a damaged cord, plug, or after the appliance malfunctions or has been damaged in any manner. Contact the manufacturer for repair.
• Do not let the cord hang over the edge of a table or touch hot surfaces.
• Do not use an outdoor cooking gas appliance for purposes other than intended.
• When connecting, first connect plug to the outdoor cooking gas appliance then plug appliance into the outlet.
• **Use only a properly wired and inspected 120VAC (15 AMP minimum) Ground Fault Circuit Interrupter (GFCI) GROUNDED 3-wire receptacle with this outdoor cooking gas appliance.**
• The GFCI receptacle must be a WEATHER-PROOF IN-USE COVERED RECEPTACLE.
• Never remove the grounding plug or use with an adapter of 2 prongs.
• Use only extension cords with a 3 prong grounding plug, rated for the power of the equipment, and approved for outdoor use with a W-A marking.
• **The provisions of the National Electric Code as well as any local codes must be observed when installing the product.**

</tr>
</tbody>
</table>

Table 2 - Griddle Dimensions

**Note:** If installing this unit in a combustible enclosure, the correct insulating liner must be used. Consult liner instructions for counter cut-out dimensions and installation.
COUNTERTOP OVERHANG

The control panel is designed to sit flush against the griddle enclosure front wall. If the non-combustible enclosure countertop extends beyond the front wall, creating a countertop overhang, it must be cut flush with the front wall for the width of the control panel or a gap will be created exposing the forward portions of the left and right side griddle fire walls. See illustrations above.

ENCLOSURE VENTILATION

FOR YOUR SAFETY, you must provide openings in the griddle enclosure for replacement air and ventilation (in case of possible leakage from gas connections or propane cylinders). Failure to do so may result in a fire or explosion causing property damage, bodily injury, or death. See the GRIDDLE ENCLOSURE / VENTILATION REQUIREMENTS section for details.
SUBSTRATE

When adding any substrate to the enclosure front wall (including tiles, stone, etc.), consider the following:

**Substrate Behind Control Panel**
Substrate + countertop "front to back" cutout must equate to **Dim. C** (see previous page) when the substrate sits flush behind the control panel.

**Substrate Alongside Control Panel**
Any additional substrate alongside the control panel does not need to be considered in **Dim. C** (see previous page), however a 1/4" clearance on each side (same as overhang) and below is required.
Note: In addition, a wire diagram can be found affixed to the inside of the control panel.
To order replacement parts, contact your local Fire Magic® dealer.

IMPORTANT
Remove all packing material (including any protective coatings) and discard prior to use.

* Not shown
Please use this page to record any information that you may want to have at hand.
INSTALLATION

It is not required to remove the control panel or knobs to install this unit.

DO NOT lift the unit from the control panel when installing.

COUNTER PREPARATION

Consult Table 3 for non-combustible enclosure cut-out dimensions. An RHP insulating liner must be used if any supporting construction is combustible. Consult the instructions that come with the liner for dimensions and additional installation information before beginning the installation.

This outdoor built-in griddle must be supported by the stainless-steel hanger extending from the upper portion of the griddle. The hanger rests on the left, right, and back of the countertop, and on the two front support adjustment screws located below the control panel on the left and right sides (see adjustment screw image on following page).

The control panel is designed to sit flush against the enclosure front wall (see Fig. 21-1). If the non-combustible enclosure countertop extends beyond the front wall, creating a countertop overhang (see Fig. 21-2), it must be cut flush with the front wall for the width of the control panel or a gap will be created exposing the forward portions of the left and right side griddle fire walls. Reference the MODEL SPECIFICATIONS section.

REMOVE PACKAGED CONTENTS AND GRIDDLE TOP

1. Remove all contents from the box.

CAUTION: THE UNIT IS HEAVY AND REQUIRES TWO PEOPLE FOR SAFE HANDLING.

2. Remove the griddle top by lifting the griddle upward and out from the main frame. Carefully rest on a sturdy surface.

Note: Lift the griddle top from the left and right raised walls. See Fig. 21-3.

CAUTION: THE GRIDDLE TOP IS HEAVY.

3. Remove all packaged contents within the unit and set aside for later installation.

Installation continued on following page
CONNECT THE GAS SUPPLY

For propane cylinders:

For connecting a propane unit to a portable propane tank, read the safety warnings and follow the instructions in the section SAFE USE AND MAINTENANCE OF PROPANE GAS CYLINDERS.

Note: When a propane cylinder is installed inside of the enclosure, the guidelines found in the ENCLOSURE / VENTILATION REQUIREMENTS section MUST be followed.

For household propane or natural gas units:

CAUTION: Use only C.S.A. listed stainless-steel flex connectors within the enclosure.

WARNING
A rubber or plastic connector will rupture or leak, resulting in an explosion or serious injury if used inside the appliance enclosure.

1. Run the attached flex connector routed under the left side of the griddle to the gas stub.

2. Turn OFF the gas supply at the source.

3. A shut-off valve is required within 6 feet of the unit.
   If shut-off valve is connected to end of gas supply stub:
   • Connect the flex connector to the shut-off valve (see Fig. 22-1). Tighten securely.

   If shut-off valve is installed in-line:
   • Install the supplied flare adapter to the gas supply using a pipe joint compound resistant to all gasses (see Fig. 22-1). Tighten securely.
   • Connect the flex connector to the flare adapter (see Fig. 22-1). Tighten securely.

4. Turn all burner control knobs to the OFF position. Turn the gas supply on. Then carefully check all gas connections for leaks with a brush and half-soap/half-water solution before lighting. NEVER USE A MATCH OR OPEN FLAME TO TEST FOR LEAKS.

5. Close the shut-off valve, then slide the griddle into place. Do not to pinch, kink, or damage the gas connector line.

6. Rotate the front support adjustment screws to the left to raise and to the right to lower the respective side of the appliance griddle. Use a $\frac{7}{16}$" open-end wrench as needed. See Fig. 22-3.

Important: Do not extend the front support adjustment screws so far that any part of the hanger is raised off the counter top.

Installation continued on following page
LIGHTING TEST
Prior to proceeding with installation, perform a lighting test.

1. Ensure the interior of the griddle is free of any packaging/plastic material.
2. Test each burner (see the LIGHTING INSTRUCTIONS section for lighting your burners).

*Note:* At this point of installation the power is not connected, so manual lighting (with a match or lighter) is required.
3. Refer to the AIR SHUTTER ADJUSTMENT section to determine if the burners require air shutter adjustments.
4. Allow the unit to completely cool after testing.

REPLACE GRIDDLE TOP ASSEMBLY
1. Carefully place the griddle top back onto the main frame.
   
   *Note:* Lift the griddle top from the left and right raised walls (see Fig. 23-1).

   **CAUTION:** THE GRIDDLE TOP IS HEAVY AND REQUIRES TWO PEOPLE FOR SAFE HANDLING.

2. Secure the griddle top by fastening the provided screw into the screw hole located on the rear of the griddle top (see Fig. 23-2).

INSTALL REAR EXHAUST PLATE
1. Assemble the provided bolts and nuts (loosely) to the three holes on the rear exhaust plate as shown in Fig. 23-3, A.
2. Align the exhaust plate with the three cutouts on the griddle rear wall and fasten (see Fig. 23-3, B).

Installation continued on following page
INSTALL THE DRIP COLLECTOR TROUGH

1. Place the left piece inside the griddle drip reservoir and completely slide it to the left side (see Fig. 24-1, A).

2. Place the right piece and ensure it overlaps the left tray as shown in Fig. 24-1, B.

INSTALL THE DRIP TRAY

Carefully align the drip tray to the opening found on the bottom front of the control panel and fully insert (see Fig. 24-2).
POWER SUPPLY

The electrical connections from the power supply to the unit come pre-connected.

If accessories are to be installed and will be powered using the same griddle power supply, instead refer to the POWER SUPPLY / WIRE HARNESS CONNECTIONS section of the owner’s manual included with the accessory for power supply installation.

CAUTION: IMPROPERLY CONNECTED WIRES WILL CAUSE DAMAGE TO THE UNIT AND MAY RESULT IN PROPERTY DAMAGE AND/OR PERSONAL INJURY.

To install the power supply:

1. Locate the wire harness on the right side of the control panel. Cut the cable tie, and then connect it to the supplied wire harness extension. See Fig. 25-1, A.

2. Connect the wire harness extension to the power supply by inserting, then screwing on the cap (see Fig. 25-1, B).

3. Route the wire harness extension below the control panel and directly downward. This will prevent overheating. DO NOT route the wire extension below the griddle. See Fig. 25-1, C.

Note: For enclosures with a solid area beneath the griddle, a cutout must be made near the wire extension to allow for the above requirement. If an insulating liner is installed, route the wire down through the nearest hole possible.

4. Mount the power supply to the inside of the enclosure using appropriate hardware for your enclosure. It MUST be located at least 12 inches below the bottom of the unit. See Fig. 25-1, D.

5. Connect the cord coming from the power supply to a 120VAC (15 AMP minimum) GFCI GROUNDED 3-wire receptacle (see Fig. 25-1, E). The GFCI receptacle must be a WEATHER-PROOF IN-USE COVERED RECEPTACLE.

WARNING: Electrical Grounding Instructions - This appliance is equipped with a three-pronged (grounding) plug for your protection against shock hazard and should be plugged directly into a properly grounded three-prong receptacle. Do not cut or remove the grounding prong from this plug.

Fig. 25-1 Electrical installation
The light switch is push button operated, and is located on the right side of the control panel. It controls the power to the lighted knobs.

Fig. 26-1 E660i Griddle controls
BEFORE INITIAL USE
Ensure that:
- the unit has been properly installed and leak tested by a qualified professional service technician and as instructed in this manual.
- you have read and understand all of the information in this manual.

BEFORE EACH USE
Ensure that:
- you smell around the appliance area for gas. If you smell gas (and all control knobs are in the OFF position), immediately shut off the gas supply and contact a qualified professional service technician or the gas supplier for inspection.
- the required vent openings and surrounding area of the griddle enclosure are clear at all times.
- the cooking area, drip tray, and drip collector trough are clean, and the drip tray and drip collector trough are properly installed.
- you inspect all piping and hoses for damage, cuts, wear, and tear. Replace any damaged components prior to use.

OPERATION
- The unit becomes HOT during use. NEVER touch any part of the cooking area or surrounding hot surfaces with bare hands. Use long-handed insulated BBQ tools and wear an insulated glove / oven mitt.
- Always keep your face and body as far from the unit as possible during use. Avoid wearing loose-fitting clothing as they could ignite.
- NEVER use charcoal or any other solid-fuel in the unit.
- NEVER leave the unit unattended during use.

After reading and understanding all bullets above, follow these steps to light and use your griddle:
1. Remove the griddle lid.
2. Wipe the cooking surface with a damp clean cloth to remove dust/grime.
3. Coat the cooking surface with a cooking oil or a non-stick cooking spray (high smoking point recommended).
4. Light the griddle per the LIGHTING INSTRUCTIONS section.
5. Turn the control knobs to the HI-LIGHT position and allow the griddle to preheat for 15 minutes.
6. Place the food on the cooking surface and cook as desired. Monitor the flames (through the burner flame viewing cutouts) and the temperature, and adjust the heat setting if necessary.

Note: Add cooking oil frequently as you cook to ensure the surface remains stick-resistant.
7. See the sections below and the following pages for all other information regarding use.

WIND CONSIDERATIONS
Proper airflow (front-to-back, Fig. 27-1) MUST be maintained for the unit to perform as it was designed. See the INSTALLATION REQUIREMENTS section for details.

When using the unit in windy conditions, the wind can disrupt the airflow and cause overheating.

AFTER EACH USE
1. Clean the cooking surface, drip collector trough, and drip tray as instructed in the SERVICING AND CLEANING section.
2. Once the unit has completely cooled, replace the stainless steel griddle lid and cover the entire unit with a griddle cover to protect when not in use.

Note: For additional cleaning information, refer to the SERVICING AND CLEANING section.
ÉCLAIRAGE ÉLECTRONIQUE

Note: Le unité doit être relié à la puissance 120VAC pour l'éclairage électronique.

1. Retirez le couvercle de la plaque chauffante du dessus de la plaque chauffante.
2. Tournez tous les boutons de commande de gaz à leurs positions de repos.
3. Allumez le gaz à sa source.

Note: N’ouvez pas plus d’une valve à la fois pour l’éclairage électronique ou manuel.

4. Diminuez le bouton de commande désiré pendant 5 secondes, puis, et tout en pressant le tour il dans le sens contraire des aiguilles d’une montre dans la position LÉGÈRE de HI. Une fois que le brûleur s’allume, libérez le bouton.

5. Répétez l’étape 4 pour que chaque brûleur additionnel soit Lit.

ÉCLAIRAGE MANUEL

ATTENTION: Attendez toujours cinq (5) minutes le gaz pour se dégager après que n'importe quelle tentative non réussie d'éclairage.

1. Suivez les étapes 1 à 3 (à gauche).
2. Tenez un briquet au butane ou une allumette à tige longue jusqu’à l’ouverture du tube d’éclairage (trou PLUS PETIT) pendant 5 secondes. Puis appuyer sur le bouton de contrôle approprié et en appuyant tourner dans le sens antihoraire à la position HI LIGHT. Retirez le briquet ou des allumettes quand le brûleur s’allume, puis relâchez le bouton de commande. Voir la Fig. 28-3.
3. Si le brûleur ne se allume pas dans les cinq (5) secondes de tourner le bouton de commande, enfoncez immédiatement le bouton et tournez la valve à AU LOIN. ATTENDEZ CINQ (5) MINUTES avant de répéter les étape 2 des instructions manuelles d’éclairage.

ARRÊT DU UNITÉ

Pour couper le unité, diminuez chaque bouton de commande de valve et tout en pressant tour il dans le sens des aiguilles d’une montre à la position de repos.

Fermez toujours la valve de la fourniture de gaz après chaque utilisation de l’unité.

EN EMPLOYANT UN RÉSERVOIR DE PROPANE PORTATIF

Des réservoirs de propane sont équipés d’un dispositif d’arrêt de sûreté qui peut ne pas causer le bas ou aucunes pression de gaz/flamme aux brûleurs si le fonctionnement et l’allumage des instructions ne sont pas suivis exactement (voir la note importante dans la section de dépannage pour plus de détails.)
LIGHTING (IGNITION) INSTRUCTIONS

Read all instructions before lighting, and follow these instructions each time you light the unit.

ELECTRONIC LIGHTING

Note: This unit must be connected to 120VAC power for electronic lighting.

1. Remove the griddle lid.
2. Turn all gas control knob(s) to their OFF position(s).
3. Turn on the gas at its source.

Note: DO NOT turn on more than one valve at a time for either electronic or manual lighting.

4. Depress the desired control knob for 5 seconds, then, while pressing turn it counterclockwise to the HI LIGHT position. Once the burner lights, release the knob.

Important: Inspect the burner flames by looking through the burner flame viewing cutouts located above the drip collector trough.

CAUTION: If a burner does not light within five (5) seconds of turning on the control knob, depress the knob and turn it to the OFF position. WAIT FIVE (5) MINUTES before repeating step 4. If you smell gas, follow the instructions on the cover of this manual. If the burners still do not light after several attempts, refer to the instructions for manual lighting.

5. Repeat step 4 for each additional burner to be lit.

MANUAL LIGHTING

CAUTION: Always wait five (5) minutes for gas to clear after any unsuccessful lighting attempt.

1. Follow steps 1 through 3 (left).
2. Hold a burning long-barrel butane lighter or burning long-stem match up to the opening of the lighting tube (SMALLER hole) for 5 seconds. Then depress the appropriate control knob and while pressing turn it counterclockwise to the HI LIGHT position. Remove the lighter or match when the burner lights, and release the control knob. See Fig. 29-3.

4. If the burner does not light within five (5) seconds of turning the control knob, immediately depress the knob and turn the valve to OFF. WAIT FIVE (5) MINUTES before repeating steps 2 through 4 of the MANUAL LIGHTING instructions.

SHUTTING OFF THE UNIT

To shut off the unit, depress each valve control knob and while pressing turn it clockwise to the OFF position. Always close the valve from the gas supply after each use of the unit.

When using a portable propane tank

Propane tanks are equipped with a safety shutdown device that may cause low or no gas pressure/flame at the burners if operating and lighting instructions are not followed exactly. (See important note in the TROUBLESHOOTING section for more details.)
SERVICING AND CLEANING

Your griddle requires regular cleaning and maintenance. Refer to these instructions for details. Performing these procedures will ensure proper operation, appearance, and safety.

WARNINGS

- Prior to servicing or cleaning make sure the unit is completely cool, the control knobs are turned to the OFF position, the gas supply is shut off, the light switch is off, and the power supply is disconnected (unless otherwise stated).
- Wear appropriate gloves and safety glasses during any servicing or cleaning.
- The griddle MUST be cleaned regularly to prevent grease build-up and other food deposits. A clean and well maintained griddle prevents the risk of grease build-up and grease fires.
- Verify proper operation after servicing or deep cleaning.
- See INSTALLATION, OPERATION, AND SAFETY INFORMATION section for additional related information.

CLEANING YOUR GRIDDLE

Before Each Use

1. Inspect and clean the cooking surface and exterior surfaces of the unit: With a cool griddle, clean any dust, grease, splatter, or spills as needed with a damp clean cloth.

After Each Use

1. Clean the cooking surface: Operate the griddle on high until hot. Then turn OFF the griddle and follow the steps below to clean. Wear protective gloves and use caution around hot surfaces.
   a. Lightly pour water on the cooking surface (or use a non-toxic griddle cleaning solution, highly recommended - not included). Then scrub using a heavy duty scrub pad on the end of a long-handled tool/tongs/etc.
      DO NOT flood the griddle with cold water or any liquid. This will cause damage to the griddle top, and cause the drip tray to overflow.
      CAUTION: Steam will be hot.
   b. Use a long-handled stainless steel spatula or heat-resistant squeegee to scrape the grime from back to front and into the drip collector trough.
   c. Wipe down with a damp, clean, heavy-duty rag. Remove all cleaning solution if used.
   d. Lightly coat the cooking surface with cooking oil to preserve it until the next cook.

2. Clean your drip collector trough and drip tray: When the griddle is cool, carefully remove the left and right trough pieces and dispose of contents appropriately. Clean in a soapy water solution. For tough deposits/stains, a copper pad can be used. Always wipe with the grain. Replace the trough assembly.
   Carefully pull out the drip tray. Remove the tray and dispose of contents appropriately. Clean in a soapy water solution. Insert the drip tray back into the griddle.

3. Cover your griddle: Once the griddle is dry and cool, place the griddle lid and cover your griddle with a vinyl cover.

Continued on next page
Twice A Year - Deep Clean

1. **Interior of griddle:** In addition to cleaning the cooking surface, drip collector trough, and drip tray, a deep clean of the interior of the griddle, burners, and all components **MUST** be performed **twice year**. Follow the steps below.
   a. With a cool griddle, remove the griddle top, heat distribution grids, burners, drip tray chute, and air baffle. Clean all components in a soapy water solution and set aside. For tough deposits/stains, a copper pad can be used.

   **Note:** Refer to the parts list and the GRIDDLE TOP REMOVAL, BURNER REMOVAL, and DRIP TRAY CHUTE REMOVAL sections as needed.

   **Important:** The burner ports and carry-over ports **MUST** be kept clean to ensure proper ignition and operation.

   b. **Interior liner:** use a stainless steel putty knife to remove any grease and food deposits. Then use a grill cleaner and a copper pad to scrub the liner. Fire Magic grill cleaner is recommended. Follow instructions provided with the grill cleaner. Wipe down the entire surface of the liner with a wet, clean, heavy-duty rag. Remove all cleaner.

   c. Re-install all components removed during this process.

2. **Exterior of griddle (except cooking surface):** With a cool griddle, use a grill cleaner (or a soapy water solution) and a clean cloth to remove grease and dirt from the griddle lid and control panel. For tough deposits/stains, a copper pad can be used. **Always wipe with the grain.** Rinse with water and dry completely. Then follow up with a stainless steel cleaner and a clean cloth. If this routine cleaning is not performed, the stainless steel may become dull and develop surface rust (due to use and atmospheric conditions). If left uncleaned, significant damage and pitting may occur.

   **Important:** **DO NOT** use steel wool, any other metal tools, or any other cleaners/chemicals to clean the exterior other than recommended above. Such items promote rust.

   **Note:** Due to the nature of stainless steel, temperatures produced by the cooking process will cause discoloration. This can be reduced by routine cleaning.

   **The griddle top cooking surface is only to be cleaned per the instructions on the previous page.**

For Environments High In Salt, Chloride, Or Other Corrosive Chemicals

When this griddle is installed in a corrosive environment such as near the ocean (salt air), poolside (chlorine and/or pool chemicals) or any other location with exposure to high salt/chloride content or corrosive chemicals/solutions, it will be more susceptible to corrosion and **MUST** be maintained/cleaned **more frequently**.

- **DO NOT** store any corrosive chemicals (chlorine, hydrochloric acid, fertilizer, etc.) near your stainless steel griddle.
- **DO NOT** allow any corrosive materials (masonry dust, debris, etc.) to settle on your stainless steel griddle.
- These environments, chemicals, and materials may cause the 304 stainless steel to develop surface rust and consequently pitting. Under these conditions the griddle exterior **MUST** be cleaned at least monthly. Inspect your griddle often and clean accordingly.

Protecting Your Griddle

In addition to the supplied griddle lid (placed first), an optional vinyl cover (model 3517-5F) will protect your griddle when not in use. Install the cover on a cool and dry griddle. **DO NOT** cover a damp griddle. During high humidity or after rainy conditions, remove the cover to dry trapped moisture if present. (If the cover is installed over a damp griddle it can cause surface rust.)

Ensure that the INSIDE of the cover is **DRY** before putting it back on the griddle.
GRIDDLE TOP REMOVAL

1. Remove the rear exhaust plate by loosening the three bolts and nuts (do not disassemble), then lift the panel up from the griddle top (see Fig. 32-1).

2. Locate the screw found on rear of the griddle top and remove (see Fig. 32-2).

3. Remove the griddle top by lifting the griddle upward and out from the main frame. Carefully rest on a sturdy surface.

   **Note:** Lift the griddle top from the left and right raised walls. Reference Fig. 32-3.

   **CAUTION:** THE GRIDDLE TOP IS HEAVY AND REQUIRES TWO PEOPLE FOR SAFE HANDLING.

4. Replace the griddle top, its screw, and the rear exhaust plate once complete.

HEAT DISTRIBUTION GRID(S) REMOVAL

1. Remove the griddle top (see GRIDDLE TOP REMOVAL section above).

2. Remove the grid(s) as shown in Fig. 32-4. Lift from the rear, and free the front tabs (on the grid) from the cutouts in the front firebox wall.

3. Replace the grid(s) and griddle top once complete.
BURNER(S) REMOVAL

1. Remove the griddle top and heat distribution grid(s) (see GRIDDLE TOP REMOVAL and HEAT DISTRIBUTION GRID REMOVAL sections on previous page).

2. Locate the burner clip (located over the rear center tube of the burner) and slightly pinch and remove the clip from the burner support. See Fig. 33-1.

3. Carefully lift the burner from the burner support anchor peg holes and out from the hole in the forward fire wall.

4. To replace the burner, slide the open cylindrical end of the burner around the orifice, enveloping it and centering on it. Then lower the back end anchor pegs into the burner support anchor peg holes.

Note: It is critical to the continued safe functioning of the burners that the orifices are centered and completely inside the burner gas inlets.

5. Re-install the burner clip around the burner and into the holes in the burner support.

6. Replace the heat distribution grid(s) and griddle top.

DRIP TRAY CHUTE REMOVAL

1. Remove the griddle top (see GRIDDLE TOP REMOVAL section on previous page).

2. Remove the drip tray chute by pulling it upward (see Fig. 33-2).

Note: Take note of the flange located on the top front of the chute for re-installation.

3. To replace, drop the chute back into the top and bottom cutouts of the front firebox wall. The front flange MUST sit flush against the firebox wall. See Fig. 33-3.

Important: The chute must be properly installed for the griddle top to install correctly.

4. Replace the griddle top.
CONVERT GAS TYPE / CHECK BURNER ORIFICES

CAUTION: Make sure the unit is at a safe temperature and isolated from gas and electrical supplies before beginning.

For your safety, exercise caution, and make sure you have adequate hand protection, such as gloves, when handling metal parts.

Apply Conversion Label

This unit comes from the factory configured for one type of gas as marked on the label behind the control panel.

When the unit is converted, the label for the new gas (included at original shipping) MUST be filled out and applied next to the existing label mentioned above.

Convert Regulator

The gas regulator, located behind the control panel (see CONTROL PANEL REMOVAL section), must be set for the type of gas used to fuel the unit. To check the regulator setting, remove the cap in the center of the regulator (Fig. 34-1, A). Holding the cap vertical (see Fig. 34-1, B), the letters at the bottom of the plastic stalk indicate the gas type for which the regulator is currently configured.

If the text on the bottom of the regulator stalk does not match the gas type connected to the unit, remove the stalk from the cap, invert, and replace into center of cap. Replace cap on the regulator, screwing down until snug. Replace the control panel.

Procedure continued on following page
Convert Gas Orifices

When converting the unit to a different gas type, each burner's orifice must be replaced with the corresponding orifice for the new gas.

See Table 1 to determine the proper orifice sizes for each burner.

**Important:** It is critical to the operation of each burner that its orifice be fully inserted into the center of its orifice opening.

**WARNING**

**HAZARDOUS OVERHEATING WILL OCCUR IF A NATURAL-GAS ORIFICE IS USED WITH PROPANE GAS.**

1. Remove the griddle top (see GRIDDLE TOP REMOVAL section).

2. Remove the heat distribution grids and burners (see HEAT DISTRIBUTION GRID REMOVAL and BURNER REMOVAL sections).

3. Use a $\frac{3}{8}$" hex nut driver to remove the exposed orifices (Fig. 35-1). Check orifices. If needed, replace them with the correct orifices for the new gas.

4. Replace the burners.

**Note:** It is critical to the continued safe functioning of the burners that the orifices are centered and completely inside the burner gas inlets.

5. Replace the heat distribution grids and griddle top.

**Connect To New Gas Supply**

Plumb the unit as appropriate for the new gas supply. (Additional components may be needed for your specific setup.) **Be sure to leak test at all connections.**
AIR SHUTTER ADJUSTMENT

Important: Air shutters are preset at the factory based on the gas the unit is built to burn. However, altitude or other local conditions may require air shutter adjustment for proper combustion.

Main Burner(s)

Flames from a properly adjusted main burner with no wind or breeze present will appear fairly steady, consistent, and mostly blue. If the tip of a flame were to turn orange, it should only do so briefly and then become blue again. The flames will appear to burn while touching the burner ports (see Figure 36-1).

If the flames have orange in them and appear to undulate slowly from side to side, or if some of them appear to lift off the burner instead of touching it, then adjust the air shutter, as instructed in this section.

CAUTION: Turn all burner control knobs to the OFF position and turn off the gas supply at the source before removing or adjusting a burner.

WARNING
Wait for the burner to be cool or use heavily insulated heat-resistant gloves when handling the burner.

1. Remove the griddle top (see GRIDDLE TOP REMOVAL section).
2. Remove the heat distribution grid, and the burner that is to be adjusted (see HEAT DISTRIBUTION GRID REMOVAL and BURNER REMOVAL sections).
3. Adjust the air shutter opening by loosening the adjustment screw with a screwdriver, then turn the air shutter to open or close it (see Fig. 36-2).

<table>
<thead>
<tr>
<th>Shutter Setting</th>
<th>Flame Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Open too far</td>
<td>Flames shorten and lift off the burner</td>
</tr>
<tr>
<td>Ideal setting</td>
<td>Blue flames just touching burner</td>
</tr>
<tr>
<td>Closed too far</td>
<td>“Lazy” flames with orange in them</td>
</tr>
</tbody>
</table>

Too large an air shutter opening will allow too much air into the burner, which will cause the flames first to shorten and then to appear to lift up off the ports. For the bottom of the flames to move closer to the ports, close the air shutter more.

If the air shutter opening is too small or closed, the flames will present consistently orange tips and become “lazy,” slowly undulating back and forth.

For propane gas, ideal settings tend to be just slightly open. For natural gas, which generally requires less primary air than propane, the main burner air shutter may be nearly closed.

4. Once the air shutter has been adjusted, replace the burner.
5. Follow the lighting instructions in this manual to light the burner.
6. Repeat steps 1-5 until the flames appear to touch the burner ports, burning fairly steadily and mostly blue (see Fig. 36-1).
7. Repeat this procedure for the other main burner, if needed.
8. Replace the heat distribution grids and griddle top.
POWER SUPPLY FUSE REPLACEMENT

If the unit is connected to the power supply but the ignition system and knob lights are not functioning, fuse replacement may be required.

1. Ensure the knobs are in the OFF position, the gas supply is turned off, and the light switch is off.
2. Disconnect the power supply cord from line power.
3. Locate the fuse holder on the power supply (see Fig. 37-1).
4. Turn the fuse cap counterclockwise to remove the cap and access the fuse.
5. Replace with a new fuse (model # 24-B-57).
6. Re-secure the fuse cap.
7. Reset the GFCI receptacle if needed, then test the unit.

Note: If the unit powers up but some or all components are not responding, reference the TROUBLESHOOTING section.
CONTROL PANEL REMOVAL

1. Turn the control knob(s) to the OFF position and turn off the gas supply to the unit.
2. Turn off the light switch and disconnect the power supply from the power source.
3. Pull the control knob(s) from the stems and set aside.
4. Slowly lift away the lighted bezels to clear the valve stems, and carefully disconnect the wires found on the back of the bezels (use your fingernail). See Fig. 38-1.
5. Remove the drip tray.
6. Using a Phillips screwdriver, unscrew and remove the control panel fastener screws and washers (located on the left and right front face of the control panel). Retain the screws for later re-installation.
7. Carefully open the control panel by lifting and pulling the control panel from the frame, allowing it to rest on the internal chain(s).

Important: When opening, take caution to not damage any wiring.

8. If wire disconnections are required, reference the wire diagram in the MODEL SPECIFICATIONS section in this instruction manual or the wire diagram label affixed to the inside of the control panel.

Note: Secure any disconnected wires (coming from the inside of the unit) to prevent them from falling in.

Note: Whenever reconnecting any wires, apply a small amount of dielectric grease to the male connector, then make the connection. This will ensure conductivity and prevent moisture from affecting the contact.

Important: During reinstallation; prior to opening the gas shut-off valve, be sure the control knob(s) are in the OFF position.
If you have trouble with the unit, please use this list to identify the problem. By trying one or more of the solutions to the possible cause, you should be able to solve the problem. If this list does not cover your present problem, or if you have other technical difficulties with the unit, please contact your local dealer.

<tr>
<td>Burner goes out on LOW</td>
<td>1. Valve &quot;Low&quot; setting needs adjustment</td>
<td>1. Light burner on HIGH, immediately turn to LOW setting. Remove knob from valve and using a small flat screwdriver, slowly turn the adjustment screw in the stem, a little at a time (30° to 45°), in either direction, until the flame is approximately 1/4&quot; in height from burner ports.</td>
</tr>
</tbody>
</table>

*Important: Propane tanks are equipped with a safety shutdown device that may cause low or no gas/flame at the burners if operating and lighting instructions are not followed exactly. If you suspect the propane tank safety shutoff is in effect: 1) Shut off all griddle burner valves. 2) Shut off tank valve. 3) Open and close a main burner valve. 4) Open tank valve. 5) Follow the LIGHTING INSTRUCTIONS. Lighting instructions are located in your owner’s manual and printed on the unit’s metal drip tray. If the problem persists, continue troubleshooting, or contact your local dealer or R. H. Peterson for assistance.

This warranty applies to the original purchaser for products which are installed in the United States or Canada and which are operated and maintained as intended for single family residential usage. This warranty is valid only with proof of purchase, shall commence on the date of purchase, and shall terminate (both as to original and any replacement products) on the anniversary date of the original purchase of the product stated on the above schedules.

This warranty covers defects in material and workmanship. This warranty does not cover parts which become defective as a result of negligence, misuse, use not in compliance with the Owner's Manual/Installation Instructions, accidental damage, improper handling, improper storage, improper installation, lack of required routine maintenance (as specified in the Owner's Manual/Installation Instructions), electrical damage, local gas impurities or failure to protect against combustibles. Product must be installed (and gas must be connected) as specified in the Owner's Manual/Installation Instructions by a qualified professional installer. Modifications to products which are not specifically authorized will void this warranty. Accessories, parts, valves, remotes, etc. when used must be Peterson products or this warranty is void. Warrantied items will be repaired or replaced at Peterson's sole discretion. This warranty does not apply to rust, corrosion, oxidation, or discoloration unless the affected part becomes inoperable.

This warranty does not cover parts which become defective as a result of negligence, misuse, use not in compliance with the Owner's Manual/Installation Instructions, accidental damage, improper handling, improper storage, improper installation, lack of required routine maintenance (as specified in the Owner's Manual/Installation Instructions), electrical damage, local gas impurities or failure to protect against combustibles. Product must be installed (and gas must be connected) as specified in the Owner's Manual/Installation Instructions by a qualified professional installer. Modifications to products which are not specifically authorized will void this warranty. Accessories, parts, valves, remotes, etc. when used must be Peterson products or this warranty is void. Warrantied items will be repaired or replaced at Peterson's sole discretion. This warranty does not apply to rust, corrosion, oxidation, or discoloration unless the affected part becomes inoperable.

This warranty does not cover labor or labor related charges, except as provided by separate specific written programs from the Peterson Co. All repair work must be performed by a qualified professional service person and requires prior approval of Peterson. Peterson may require the defective product or part to be returned to the factory to determine the cause of failure. Peterson will pay freight charges if the product or part is determined to be defective. This warranty does not cover breakage in shipment from our (Independent) distributor to its customer if the damage is determined to have occurred during that shipment.

This warranty specifically excludes liability for indirect, incidental, or consequential damages. Some states and provinces do not allow the exclusion or limitation of incidental or consequential damages, so the above exclusion may not apply to you. This warranty gives you specified legal rights, and you may have other rights that vary from state to state or province.

For additional information regarding this warranty, or to place a warranty claim, contact the R. H. Peterson dealer where the product was purchased.

When contacting your Peterson dealer or the R. H. Peterson Co., please provide the following information:
- Your name, address, telephone number, e-mail
- Sales receipt showing where purchased and date purchased
- Model number, serial number of product, date code
- Relevant information: installer, additions, repairs, when defect was first noted
