**IMPORTANT INFORMATION**

Read these instructions and the safety and installation sections of the appliance owner’s manual before liner installation.

The insulating liner comes pre-assembled and ready to install.

FOR YOUR SAFETY, the enclosure must provide openings for drainage, replacement air, and cross-ventilation of any storage area exposed to possible leakage from gas connections, the unit, or propane cylinders.

This liner is only for installation in an enclosure constructed of combustible materials and a NON-COMBUSTIBLE countertop.

All additional enclosure requirements, safety guidelines, and any other requirements found in your appliance owner’s manual MUST BE FOLLOWED.

**DETERMINE INSTALL METHOD AND PREPARE CUTOUT**

The insulating liner can be hung from the countertop using the liner hangers (see Fig. 1-1, A), or the liner bottom can sit directly on a sturdy base with the additional support of the hangers (see Fig. 1-1, B).

See your appliance owner's manual for all overall enclosure requirements.

See sections on following pages regarding cutout dimensions, and countertop overhang and substrate considerations. Then proceed to INSTALLATION.

* Includes any substrate at front wall of enclosure (in the areas the liner flanges are to sit flush against). See SUBSTRATE section on next page.

† Only applicable for enclosures that have countertops with an overhang (see illustration and section below).

**Countertop Overhang**

The liner front flanges are designed to sit flush against the enclosure front wall. If the countertop extends beyond the front wall, creating a countertop overhang, it must be cut flush with the front wall for the width of the liner flanges or a gap will be created exposing the forward portions of the left and right side liner walls. See illustrations above.

**Important:** FOR YOUR SAFETY, you must provide openings in the island enclosure for drainage, replacement air, and cross-ventilation of any storage area exposed to possible leakage from gas connections, the unit, or propane bottles. See the ENCLOSURE REQUIREMENTS section in appliance owner's for details.
SPECIFICATIONS (cont.)

Substrate
When adding any substrate to the enclosure front wall (including tiles, stone, etc.), consider the following:

Substrate Behind Liner Flange
Substrate + countertop "front to back" cutout must equate to Dim. C (see previous page) when the substrate sits flush behind the liner flanges.

Substrate Alongside Liner Flange
Any additional substrate alongside the liner flanges does not need to be considered in Dim. C (see previous page).

INSTALLATION

1. Install the insulating liner as shown in Fig. 3-3.
   - If installing on a countertop with an irregular/textured surface, a bead of silicone sealer rated for 400° or higher may be needed.
   - If the liner is being installed using method B, a 1 1/2" hole must be cut through the base (enclosure) to allow for proper gas installation.
     If applicable, a second 1 1/2" hole must be cut to allow for proper electrical installation.
     See Fig. 3-3 for hole locations. Use the insulating liner holes as guides. Remove knock-outs as needed.
   - Holes exist at the rear of the liner; however, it is recommended to use the front holes.

2. Install your appliance per your appliance owner's manual.
   Important: Do not allow the appliance hanger to come in contact with the countertop or any combustible surface (see Fig. 3-4).
